- *Hedging instruments risk* – The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser’s opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund’s use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund’s investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser’s ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Privately placed securities risk* – The Fund’s investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund’s liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund’s ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 6/30/2018): 5.27%; Worst Quarter (ended 12/31/2018): -1.19%**

### Average Annual Total Returns as of 12/31/2019

	1 year	Life of Fund (April 27, 2015)
JNL/Westchester Capital Event Driven Fund (Class A)	11.77%	4.09%
Wilshire Liquid Alternative Event Driven Index (reflects no deduction for fees, expenses, or taxes)	6.11%	1.49%

### Portfolio Management.

#### Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

#### Sub-Adviser:

Westchester Capital Management, LLC ("Westchester")

#### Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Michael T. Shannon	March 2016	Portfolio Manager, Westchester
Roy D. Behren	March 2016	Portfolio Manager, Westchester

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

**Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

**Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/WMC Balanced Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

---

**Investment Objective.** The investment objective of the Fund is reasonable income and long-term capital growth.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

**(fees paid directly from your investment)**

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.32%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.10%
Acquired Fund Fees and Expenses <sup>2</sup>	0.01%
<b>Total Annual Fund Operating Expenses</b>	<b>0.73%</b>

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Balanced Fund Class A			
1 year	3 years	5 years	10 years
\$75	\$233	\$406	\$906

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	42%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing primarily in a diversified portfolio of common stocks and investment grade fixed-income securities. The Fund may invest in any type or class of security. The anticipated mix of the Fund’s holdings is typically 60-70% of its assets in equities and 30-40% in fixed-income securities, including, investment-grade corporate bonds, U.S. Treasury and government agency bonds, mortgage-backed securities, asset-backed securities, and commercial-backed securities. Cash and cash equivalents are included in the fixed income fund weighting.

The Fund may invest in derivatives to reduce fixed-income exposure to facilitate meeting the Fund's objective.

The Fund may invest up to 25% of its assets in foreign equity and foreign fixed-income securities.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund’s investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security

before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment strategy risk* – The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing

changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 65% S&P 500 Index, 35% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

**Annual Total Returns as of December 31**

**Class A**

**Best Quarter (ended 3/31/2019): 8.74%; Worst Quarter (ended 9/30/2011): -8.79%**

**Portfolio Management.**

**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

**Sub-Adviser:**

Wellington Management Company LLP ("Wellington Management")

**Portfolio Managers:**

Name:	Joined Fund Management Team In:	Title:
Edward P. Bousa, CFA*	2004	Senior Managing Director and Equity Portfolio Manager, Wellington Management
Michael F. Stack, CFA	2014	Senior Managing Director and Fixed Income Portfolio Manager, Wellington Management
Loren L. Moran, CFA	2018	Senior Managing Director and Fixed Income Portfolio Manager, Wellington Management

<b>Name:</b>	<b>Joined Fund Management Team In:</b>	<b>Title:</b>
Daniel J. Pozen	September 2019	Senior Managing Director and Equity Portfolio Manager, Wellington Management

\* Effective June 30, 2020, Mr. Bousa will be removed as a portfolio manager for the Fund.

### **Purchase and Redemption of Fund Shares**

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

### **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

### **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/WMC Government Money Market Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

**Investment Objective.** The investment objective of the Fund is to achieve as high a level of current income as is consistent with the preservation of capital and maintenance of liquidity.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.16%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.11%
Total Annual Fund Operating Expenses <sup>2,3</sup>	0.57%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Expense information has been restated to reflect current fees.

<sup>3</sup> JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of shares of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period. The fee waiver will continue through April 30, 2021. The Adviser may extend the fee waiver for a subsequent one-year term, and thereafter, the fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is in effect through April 30, 2021. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<b>JNL/WMC Government Money Market Fund Class A</b>			
1 year	3 years	5 years	10 years
\$58	\$183	\$318	\$714

**Principal Investment Strategies.** Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 99.5% of its total assets in cash, U.S. Government securities, and/or repurchase agreements that are “collateralized fully” (i.e., collateralized by cash or government securities). The government securities typically have a maximum remaining maturity of 397 calendar days and the repurchase agreements are collateralized by cash or government securities with a maximum remaining maturity of 397 days. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in government securities or repurchase agreements collateralized by government securities. As a government money market fund, the Fund is exempt from requirements that permit money market funds to impose a liquidity fee and/or temporary redemption gate. While the Fund’s Board of Trustees may elect to subject the Fund to liquidity fee and gate requirements in the future, the Board of Trustees has not elected to do so at this time.

The Fund seeks to maintain a stable net asset value of \$1.00 per share, neither the Federal Deposit Insurance Company, nor any other government agency insures or protects your investment.

**Principal Risks of Investing in the Fund.** You could lose money by investing in the Fund. Although the Fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Fund’s sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time.

As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. While the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to shares of the Fund itself. The principal risks associated with investing in the Fund include:

- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.
- *Income risk* – The Fund is subject to the risk that the income generated from the Fund’s investments may decline in the event of falling interest rates. Income risk may be high if the Fund’s income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund’s distributions to shareholders may decline when interest rates fall.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

- *Repurchase agreements, purchase and sale contracts risk* – If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Prior to September 19, 2016, the Fund was operated as a prime money market fund.

Effective September 19, 2016, the Fund operates as a government money market fund and, as such, invests at least 99.5% of its total assets in cash, government securities and/or repurchase agreements that are "collateralized fully" (i.e., backed by cash or government securities).

The 7-day yield of Class A on December 31, 2019, was 1.10%.

**Annual Total Returns as of December 31**

**Class A**

**Best Quarter (ended 6/30/2019): 0.43%; Worst Quarter (ended 9/30/2017): 0.00%**

**Average Annual Total Returns as of 12/31/2019**

	<b>1 year</b>	<b>5 year</b>	<b>10 year</b>
JNL/WMC Government Money Market Fund (Class A)	1.54%	0.56%	0.28%
FTSE U.S. Treasury Bill Index (1-Month) (reflects no deduction for fees, expenses, or taxes)	2.20%	1.01%	0.53%

## **Portfolio Management.**

### **Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

### **Sub-Adviser:**

Wellington Management Company LLP ("Wellington Management")

## **Purchase and Redemption of Fund Shares**

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/WMC Value Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

---

**Investment Objective.** The investment objective of the Fund is long-term growth of capital.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

**(fees paid directly from your investment)**

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.38%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.10%
<b>Total Annual Fund Operating Expenses</b>	<b>0.78%</b>

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Value Fund Class A			
1 year	3 years	5 years	10 years
\$80	\$249	\$433	\$966

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	49%

**Principal Investment Strategies.** The Fund seeks to meet its objective by investing under normal circumstances at least 65% of its total assets in common stocks of domestic companies. Although the Fund may invest in companies with a broad range of market capitalizations, the Fund will tend to focus on companies with large market capitalizations (generally above \$10 billion). Using a value approach, the Fund seeks to invest in stocks that Wellington Management Company LLP (“Sub-Adviser”) believes are underpriced relative to other stocks.

The Fund may invest up to 20% of its total assets in the securities of foreign issuers.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund’s investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available

information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

**Annual Total Returns as of December 31**

**Class A**

**Best Quarter (ended 12/31/2011): 13.49%; Worst Quarter (ended 9/30/2011): -17.27%**

**Average Annual Total Returns as of 12/31/2019**

	1 year	5 year	10 year
JNL/WMC Value Fund (Class A)	27.51%	7.68%	10.59%
MSCI USA Value Index (Gross) (reflects no deduction for fees, expenses, or taxes)	25.73%	9.06%	11.83%

## Portfolio Management.

### Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

### Sub-Adviser:

Wellington Management Company LLP (“Wellington Management”)

### Portfolio Managers:

<b>Name:</b>	<b>Joined Fund Management Team In:</b>	<b>Title:</b>
W. Michael Reckmeyer, III, CFA	2008	Senior Managing Director and Equity Portfolio Manager, Wellington Management
Adam H. Illfelder, CFA	2018	Managing Director and Equity Portfolio Manager, Wellington Management

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

### Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

### Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Competitive Advantage Fund (formerly, JNL/S&P Competitive Advantage Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital appreciation.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	Class A
Management Fee	0.26%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.10%
Total Annual Fund Operating Expenses	0.66%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Competitive Advantage Fund Class A			
1 year	3 years	5 years	10 years
\$67	\$211	\$368	\$822

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	43%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500® Index that are believed to have superior profitability, as measured by return on invested capital, and trade at relatively attractive valuations. Goldman Sachs Asset Management, L.P. (“GSAM”) excludes stocks it views as lower quality using the S&P Quality Rankings. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, “Sub-Advisers”) generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

#### *S&P Quality Rankings*

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

Certain provisions of the Investment Company Act of 1940, as amended (“1940 Act”), and other U.S. “Federal Securities Laws” may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may invest in a combination of exchange-traded funds (“ETFs”) to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund’s investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund’s investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager’s choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. “Federal Securities Laws” may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory

limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.

- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Equal Weight Index as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 16.20%; Worst Quarter (ended 12/31/2018): -14.38%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs Competitive Advantage Fund (Class A)	29.36%	10.01%	13.91%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	31.49%	11.70%	13.56%
S&P 500 Equal Weight Index (reflects no deduction for fees, expenses, or taxes)	29.24%	9.77%	13.54%

### Portfolio Management.

#### Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

#### Sub-Advisers:

Goldman Sachs Asset Management, L.P. ("GSAM")  
Mellon Investments Corporation ("Mellon")

#### Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marcus Ng, CFA	July 2019	Vice President, GSAM
Nicholas Chan, CFA	July 2019	Managing Director, GSAM
Karen Q. Wong, CFA	2007	Managing Director, Head of Index – Portfolio Management, Mellon
Richard A. Brown, CFA	2007	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon
Thomas J. Durante, CFA	2010	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Dividend Income & Growth Fund (formerly, JNL/S&P Dividend Income & Growth Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is primarily capital appreciation with a secondary focus on current income.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.25%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.10%
Total Annual Fund Operating Expenses	0.65%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Dividend Income & Growth Fund Class A			
1 year	3 years	5 years	10 years
\$66	\$208	\$362	\$810

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	41%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in the stock of anywhere from 33 to 99 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500<sup>®</sup> Index that have attractive dividend yields and strong capital structures as determined by Goldman Sachs Asset Management, L.P. (“GSAM”). The holdings in the portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

The Fund is comprised of three distinct sub-portfolios, each of which selects 33 company names and rebalances on a separate date. The 33 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, “Sub-Advisers”) generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

#### *S&P Quality Rankings*

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

#### *S&P Global Ratings Issuer Credit Ratings*

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings analysts obtain information from public reports, as well as from interviews and discussions with the issuer’s management. They use that information and apply their analytical judgment to assess the entity’s financial condition, operation performance, policies and risk management strategies.

Certain provisions of the Investment Company Act of 1940, as amended (“1940 Act”), and other U.S. “Federal Securities Laws” may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. “Federal Securities Laws” may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund’s expenses and may limit the Fund’s performance.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser’s skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund’s performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

### Annual Total Returns as of December 31

#### Class A

**Best Quarter (ended 3/31/2013): 13.78%; Worst Quarter (ended 12/31/2018): -10.03%**

#### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a

fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

### **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

### **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Intrinsic Value Fund (formerly, JNL/S&P Intrinsic Value Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital appreciation.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	Class A
Management Fee	0.26%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.10%
Total Annual Fund Operating Expenses	0.66%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Intrinsic Value Fund Class A			
1 year	3 years	5 years	10 years
\$67	\$211	\$368	\$822

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	59%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 45 to 60 distinct companies) included in the S&P 500<sup>®</sup> Index that generate strong free cash flows and sell at relatively attractive valuations. Goldman Sachs Asset Management, L.P. (“GSAM”) will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

GSAM excludes companies in the Financials sector from the selection. GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, “Sub-Advisers”) generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

#### *S&P Quality Rankings*

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

#### *S&P Global Ratings Issuer Credit Ratings*

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings Standard & Poor’s Ratings Services analysts obtain information from public reports, as well as from interviews and discussions with the issuer’s management. They use that information and apply their analytical judgement to assess the entity’s financial condition, operation performance, policies and risk management strategies.

Certain provisions of the Investment Company Act of 1940, as amended (“1940 Act”), and other U.S. “Federal Securities Laws” may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption and purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Portfolio turnover risk* – Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. “Federal Securities Laws” may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund’s expenses and may limit the Fund’s performance.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser’s skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund’s performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1,

2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

### Annual Total Returns as of December 31

#### Class A

**Best Quarter (ended 3/31/2013): 18.48%; Worst Quarter (ended 12/31/2018): -15.66%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs Intrinsic Value Fund (Class A)	21.25%	4.26%	11.73%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	31.49%	11.70%	13.56%
S&P 500 Value Index (reflects no deduction for fees, expenses, or taxes)	31.95%	9.52%	12.16%

### Portfolio Management.

#### Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

#### Sub-Advisers:

Goldman Sachs Asset Management, L.P. ("GSAM")

Mellon Investments Corporation ("Mellon")

#### Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marcus Ng, CFA	July 2019	Vice President, GSAM
Nicholas Chan, CFA	July 2019	Managing Director, GSAM
Karen Q. Wong, CFA	2007	Managing Director, Head of Index – Portfolio Management, Mellon
Richard A. Brown, CFA	2007	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon
Thomas J. Durante, CFA	2010	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those

insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

### **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

### **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Total Yield Fund (formerly, JNL/S&P Total Yield Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital appreciation.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.26%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.11%
Total Annual Fund Operating Expenses	0.67%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Total Yield Fund Class A			
1 year	3 years	5 years	10 years
\$68	\$214	\$373	\$835

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	83%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 40 to 65 distinct companies) included in the S&P 500<sup>®</sup> Index that generate positive cash flow and have a strong track record, as determined by Goldman Sachs Asset Management, L.P. (“GSAM”) of returning cash to investors, such as through dividends, share repurchases or debt retirement.

GSAM excludes companies in the Banks and Utilities subsectors. GSAM incorporates positive profits measures and S&P Quality Rankings in its selection process. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, “Sub-Advisers”) generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

#### *S&P Quality Rankings*

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

Certain provisions of the Investment Company Act of 1940, as amended (“1940 Act”), and other U.S. “Federal Securities Laws” may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds (“ETFs”) to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Portfolio turnover risk* – Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. “Federal Securities Laws” may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser’s skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund’s performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2013): 16.99%; Worst Quarter (ended 9/30/2011): -20.65%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs Total Yield Fund (Class A)	22.09%	4.59%	10.81%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	31.49%	11.70%	13.56%
S&P 500 Value Index (reflects no deduction for fees, expenses, or taxes)	31.95%	9.52%	12.16%

### Portfolio Management.

#### Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

#### Sub-Advisers:

Goldman Sachs Asset Management, L.P. ("GSAM")  
Mellon Investments Corporation ("Mellon")

#### Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marcus Ng, CFA	July 2019	Vice President, GSAM
Nicholas Chan, CFA	July 2019	Managing Director, GSAM
Karen Q. Wong, CFA	2007	Managing Director, Head of Index – Portfolio Management, Mellon
Richard A. Brown, CFA	2007	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon
Thomas J. Durante, CFA	2010	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs International 5 Fund (formerly, JNL/S&P International 5 Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital appreciation.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.30%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.15%
Total Annual Fund Operating Expenses	0.75%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs International 5 Fund Class A			
1 year	3 years	5 years	10 years
\$77	\$240	\$417	\$930

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	53%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in the stocks of foreign companies located in developed countries throughout the world, excluding the United States, that are identified through a disciplined, rules-based investment process. The Fund allocates all of its net assets among the underlying regional strategies listed below:

**S&P Asia Pac Ex Japan Strategy** – This strategy focuses on companies located in developed countries in the Asia-Pacific (excluding Japan) geographic region that have delivered attractive cash returns to shareholders while seeking to avoid companies with less attractive profitability.

**S&P Canada Strategy** – This strategy focuses on companies located in Canada that the Sub-Adviser believes to have attractive free cash flows in relation to equity market capitalization while seeking to avoid companies that the Sub-Adviser believes have undergone unattractive changes to capital structure.

**S&P Europe Strategy** – This strategy focuses on companies located in Western Europe that the Sub-Adviser believes have above average free cash flows in relation to equity market valuation and attractive price momentum.

**S&P Japan Strategy** – This strategy focuses on companies located in Japan that the Sub-Adviser believes have attractive dividend yields while attempting to avoid overpaying through valuation metrics.

**S&P Middle East Strategy** – This strategy seeks to achieve capital appreciation by investing liquidity weighted allocations to the common stock of approximately 10% of the companies in the S&P Developed Middle East & Africa LargeMid® Index that the Sub-Adviser believes to be the most attractive. The Sub-Adviser defines attractive stocks as those with the strongest Free Cash Flow Yield, and either above average profitability or favorable price momentum. S&P Quality Rankings are used to exclude companies with the lower quality, helping to filter those that may look attractive on a capital appreciation basis but may have longer term low quality characteristics.

While each of these underlying regional strategies seeks to provide capital appreciation, each underlying regional strategy follows a different principal investment strategy.

Each of the underlying regional strategies invests by selecting from the stock of companies included in a corresponding regional index, each of which is a sub-index of the S&P Developed Ex-U.S. LargeMid Index. The S&P Developed Ex-U.S. LargeMid Index measures the performance of companies located in developed countries around the world, excluding the United States. As of December 31, 2019, the range of market capitalizations of companies included in the index was between \$365.23 million and \$321.96 billion. The size of companies in the S&P Developed Ex-U.S. LargeMid Index changes with market conditions, which can result in changes to the market capitalization range of companies in the index.

The securities for each underlying regional strategy are selected only once annually on each stock selection date. The Fund is rebalanced annually between each of the above specialized strategies on or the first business day of March.

Goldman Sachs Asset Management, L.P. (“GSAM”) and Mellon Investments Corporation (“Sub-Advisers”) generally use a buy and hold strategy, trading only on or around each stock selection date, when cash flow activity occurs, and for dividend reinvestment purposes. The Sub-Advisers may also trade for mergers if the original stock included in the Fund’s portfolio is not the surviving company.

The Fund may invest in a combination of exchange-traded funds (“ETFs”) to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the

Fund's objective. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain appropriate currency exposures.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *European investment risk* – Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as “Brexit,” may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- *Portfolio turnover risk* – Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Pacific Rim investing risk* – The Pacific Rim economies are in various stages of economic development. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. If the Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

**Annual Total Returns as of December 31**

**Class A**

**Best Quarter (ended 6/30/2017): 11.87%; Worst Quarter (ended 12/31/2018): -11.97%**

## **Purchase and Redemption of Fund Shares**

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund’s shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund’s dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs 4 Fund (formerly, JNL/S&P 4 Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital appreciation.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.00%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.36%
Total Annual Fund Operating Expenses	0.71%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs 4 Fund Class A			
1 year	3 years	5 years	10 years
\$73	\$227	\$395	\$883

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	11%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of the following Funds (“Underlying Funds”):

- 25% in the JNL/Goldman Sachs Competitive Advantage Fund;
- 25% in the JNL/Goldman Sachs Dividend Income & Growth Fund;
- 25% in the JNL/Goldman Sachs Intrinsic Value Fund; and
- 25% in the JNL/Goldman Sachs Total Yield Fund.

Under all market conditions, the Fund seeks to maintain the aforementioned target weights to the Underlying Funds, although market movements may result in some variance around the target weights. The daily flows in and out of the Fund are allocated in a manner to help minimize dispersion from the target weights of the Underlying Funds.

The investment policies and risks of the Underlying Funds are further described elsewhere in this Prospectus. It should be noted that the Fund’s investment objective and investment strategies remain constant regardless of which Underlying Funds the Fund is invested in.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes of Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund’s portfolio. Generally, the smaller the company size, the greater these risks become.

- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

#### Annual Total Returns as of December 31

##### Class A

**Best Quarter (ended 3/31/2013): 14.92%; Worst Quarter (ended 12/31/2018): -13.91%**

#### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs 4 Fund (Class A)	25.04%	7.21%	12.54%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	31.49%	11.70%	13.56%
S&P 500 Value Index (reflects no deduction for fees, expenses, or taxes)	31.95%	9.52%	12.16%

## Portfolio Management.

### Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

### Portfolio Managers:

<b>Name:</b>	<b>Joined Fund Management Team In:</b>	<b>Title:</b>
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

### Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

### Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Managed Conservative Fund (formerly, JNL/S&P Managed Conservative Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objectives.** The investment objective of the Fund is to seek current income. Capital growth is a secondary objective.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	Class A
Management Fee	0.10%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.66%
Total Annual Fund Operating Expenses	1.11%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Conservative Fund Class A			
1 year	3 years	5 years	10 years
\$113	\$353	\$612	\$1,352

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	19%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 10% to 30% of its assets to Underlying Funds that invest primarily in equity securities, 70% to 90% to Underlying Funds that invest primarily in fixed-income securities and 0% to 30% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Conservative Index with the Morningstar Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% Bloomberg Barclays U.S. Aggregate Bond Index, 15% S&P 500 Index, 5% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 5.34%; Worst Quarter (ended 12/31/2018): -3.18%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs Managed Conservative Fund (Class A)	11.06%	3.69%	4.65%
Morningstar Conservative Target Risk Index (reflects no deduction for fees, expenses, or taxes)	11.22%	4.05%	4.53%
80% Bloomberg Barclays U.S. Aggregate Bond Index, 15% S&P 500 Index, 5% MSCI EAFE Index (Net) (reflects no deduction for fees, expenses, or taxes)	12.70%	4.57%	5.42%
Dow Jones Conservative Index (reflects no deduction for fees, expenses, or taxes)	8.13%	3.07%	3.97%

Christopher Lvoff, CFA, ASA	July 2019	Managing Director, GSAM

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

**Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

**Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Managed Moderate Fund (formerly, JNL/S&P Managed Moderate Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is current income and capital growth.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.68%
Total Annual Fund Operating Expenses	1.12%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Moderate Fund Class A			
1 year	3 years	5 years	10 years
\$114	\$356	\$617	\$1,363

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	16%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 30% to 50% of its assets to Underlying Funds that invest primarily in equity securities, 50% to 70% to Underlying Funds that invest primarily in fixed-income securities and 0-25% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% Bloomberg Barclays U.S. Aggregate Bond Index, 30% S&P 500 Index, 10% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 7.32%; Worst Quarter (ended 9/30/2011): -7.02%**

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Managed Moderate Growth Fund (formerly, JNL/S&P Managed Moderate Growth Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital growth and current income.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.08%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.68%
Total Annual Fund Operating Expenses	1.11%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<b>JNL/Goldman Sachs Managed Moderate Growth Fund Class A</b>			
1 year	3 years	5 years	10 years
\$113	\$353	\$612	\$1,352

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

<b>Period</b>	
1/1/2019 - 12/31/2019	16%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 50% to 70% of its assets to Underlying Funds that invest primarily in equity securities, 30% to 50% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 45% S&P 500 Index, 40% Bloomberg Barclays U.S. Aggregate Bond Index, 15% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 9.59%; Worst Quarter (ended 9/30/2011): -10.88%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs Managed Moderate Growth Fund (Class A)	19.12%	6.61%	7.80%
Morningstar Moderate Target Risk Index (reflects no deduction for fees, expenses, or taxes)	19.03%	6.75%	7.72%
45% S&P 500 Index, 40% Bloomberg Barclays U.S. Aggregate Bond Index, 15% MSCI EAFE Index (Net) (reflects no deduction for fees, expenses, or taxes)	20.81%	7.49%	8.60%
Dow Jones Moderate Index (reflects no deduction for fees, expenses, or taxes)	18.60%	6.60%	7.76%
Bloomberg Barclays U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	8.72%	3.05%	3.75%

Michael Carapucci	2010	Vice President, GSAM
Christopher Lvoff, CFA, ASA	July 2019	Managing Director, GSAM

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Managed Growth Fund (formerly, JNL/S&P Managed Growth Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

**Investment Objective.** The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.08%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.68%
Total Annual Fund Operating Expenses	1.11%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Growth Fund Class A			
1 year	3 years	5 years	10 years
\$113	\$353	\$612	\$1,352

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	15%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 90% of its assets to Underlying Funds that invest primarily in equity securities, 10% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0-15% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% S&P 500 Index, 20% Bloomberg Barclays U.S. Aggregate Bond Index, 20% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 12.23%; Worst Quarter (ended 9/30/2011): -14.72%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year
JNL/Goldman Sachs Managed Growth Fund (Class A)	24.41%	8.41%	9.66%
Morningstar Moderately Aggressive Target Risk Index (reflects no deduction for fees, expenses, or taxes)	22.95%	7.96%	9.07%
60% S&P 500 Index, 20% Bloomberg Barclays U.S. Aggregate Bond Index, 20% MSCI EAFE Index (Net) (reflects no deduction for fees, expenses, or taxes)	24.93%	8.88%	10.11%

Michael Carapucci	2010	Vice President, GSAM
Christopher Lvoff, CFA, ASA	July 2019	Managing Director, GSAM

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

**Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

**Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL/Goldman Sachs Managed Aggressive Growth Fund (formerly, JNL/S&P Managed Aggressive Growth Fund) Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

---

**Investment Objective.** The investment objective of the Fund is capital growth.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.06%
Acquired Fund Fees and Expenses <sup>2</sup>	0.68%
Total Annual Fund Operating Expenses	1.13%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Aggressive Growth Fund Class A			
1 year	3 years	5 years	10 years
\$115	\$359	\$622	\$1,375

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	13%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates up to 80% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 20% to Underlying Funds that invest primarily in fixed-income securities and 0% to 10% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Aggressive Index with the Morningstar Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 65% S&P 500 Index, 10% Bloomberg Barclays U.S. Aggregate Bond Index, 25% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 13.37%; Worst Quarter (ended 9/30/2011): -16.88%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	10 year

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL Conservative Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

---

**Investment Objective.** The investment objective of the Fund is to seek the generation of income through investment in other funds (the "Underlying Funds").

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.13%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.70%
Total Annual Fund Operating Expenses <sup>3</sup>	1.18%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

<sup>3</sup> Expense information has been restated to reflect current fees.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<b>JNL Conservative Allocation Fund Class A</b>			
1 year	3 years	5 years	10 years
\$120	\$375	\$649	\$1,432

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

<b>Period</b>	
1/1/2019 - 12/31/2019	32%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of the Underlying Funds. The Fund allocates its assets to Underlying Funds that invest primarily in fixed income and other income-oriented securities (including high-yield (“junk”) bonds) of issuers in the U.S. and foreign countries, including emerging markets. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the “Additional Information About Each Fund” section of the Prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 0% to 40% of its assets to Underlying Funds that invest primarily in equity securities, 60% to 100% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed Income and International Fixed Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund’s net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund’s registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL/Nicholas Convertible Arbitrage Fund (the “Acquired Fund”), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund’s principal investment strategies, the Fund replaced the Dow Jones Conservative Index with the Morningstar Conservative Target Risk Index as the Fund’s primary benchmark.

Consistent with the Fund’s principal investment strategies, the Fund uses the 20% MSCI All Country World Index (Net), 80% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 6.01%; Worst Quarter (ended 6/30/2013): -3.23%**

### Average Annual Total Returns as of 12/31/2019

	1 year	5 year	Life of Fund (February 06, 2012)
JNL Conservative Allocation Fund (Class A)	12.46%	3.84%	3.79%
Morningstar Conservative Target Risk Index (reflects no deduction for fees, expenses, or taxes)	11.22%	4.05%	3.97%
20% MSCI All Country World Index (Net), 80% Bloomberg Barclays U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	12.26%	4.23%	4.26%

### Portfolio Management.

#### Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

#### Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	April 2015	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2015	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2015	Portfolio Manager, JNAM

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL Moderate Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

**Investment Objective.** The investment objective of the Fund is to seek a balance between the generation of income and the long-term growth of capital through investment in other funds (the "Underlying Funds").

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.12%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.73%
Total Annual Fund Operating Expenses <sup>3</sup>	1.20%

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

<sup>3</sup> Expense information has been restated to reflect current fees.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<b>JNL Moderate Allocation Fund Class A</b>			
1 year	3 years	5 years	10 years
\$122	\$381	\$660	\$1,455

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	22%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of the Underlying Funds. The Fund allocates its assets to Underlying Funds that invest primarily in fixed income and other income-oriented securities (including high-yield (“junk”) bonds) as well as dividend-paying equity securities of issuers in the U.S. and foreign countries, including emerging markets. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the “Additional Information About Each Fund” section of the Prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 20% to 60% of its assets to Underlying Funds that invest primarily in equity securities, 40% to 80% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed Income and International Fixed Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund’s net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund’s registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 50 Fund (the “Acquired Fund”), a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund’s principal investment strategies, the Fund uses the 40% MSCI All Country World Index (Net), 60% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

## Annual Total Returns as of December 31

### Class A

**Best Quarter (ended 3/31/2019): 7.51%; Worst Quarter (ended 12/31/2018): -5.44%**

Bloomberg Barclays U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	8.72%	3.05%	2.85%

### Portfolio Management.

#### Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

#### Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	April 2015	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2015	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2015	Portfolio Manager, JNAM

### Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

## **Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

## **Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

## Summary Prospectus – April 27, 2020

### JNL Moderate Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

**Investment Objectives.** The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.74%
<b>Total Annual Fund Operating Expenses</b>	<b>1.18%</b>

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Moderate Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$120	\$375	\$649	\$1,432

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	17%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 40% to 80% of its assets to Underlying Funds that invest primarily in equity securities, 20% to 60% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund’s Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund’s portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Moderate Growth Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the JNAM Guidance – Moderate Growth Fund.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund’s registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 25 Fund, a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the JNL Institutional Alt 25 Fund.

Effective June 24, 2019, for consistency with the Fund’s principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund’s primary benchmark.

Consistent with the Fund’s principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

### Annual Total Returns as of December 31

#### Class A

**Best Quarter (ended 9/30/2010): 9.31%; Worst Quarter (ended 9/30/2011): -9.79%**

**Average Annual Total Returns as of 12/31/2019**

	<b>1 year</b>	<b>5 year</b>	<b>10 year</b>
JNL Moderate Growth Allocation Fund (Class A)	19.53%	6.13%	7.73%
Morningstar Moderate Target Risk Index (reflects no deduction for fees, expenses, or taxes)	19.03%	6.75%	7.72%
60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	19.41%	6.43%	6.99%
Dow Jones Moderate Index (reflects no deduction for fees, expenses, or taxes)	18.60%	6.60%	7.76%

**Portfolio Management.****Investment Adviser to the Fund:**

Jackson National Asset Management, LLC (“JNAM”)

**Portfolio Managers:**

<b>Name:</b>	<b>Joined Fund Management Team In:</b>	<b>Title:</b>
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

**Purchase and Redemption of Fund Shares**

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

**Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

**Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## Summary Prospectus – April 27, 2020

### JNL Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

---

**Investment Objective.** The investment objective of the Fund is to seek capital growth and current income.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

**(fees paid directly from your investment)**

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.75%
<b>Total Annual Fund Operating Expenses</b>	<b>1.19%</b>

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$121	\$378	\$654	\$1,443

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	13%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 60% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 40% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund’s Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund’s portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

- Foreign regulatory risk** – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Growth Fund (the “Acquired Fund”), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

**Annual Total Returns as of December 31**

**Class A**

**Best Quarter (ended 9/30/2010): 11.42%; Worst Quarter (ended 9/30/2011): -13.01%**

**Average Annual Total Returns as of 12/31/2019**

	<b>1 year</b>	<b>5 year</b>	<b>10 year</b>
JNL Growth Allocation Fund (Class A)	23.68%	7.05%	8.80%

**Portfolio Management.****Investment Adviser to the Fund:**

Jackson National Asset Management, LLC (“JNAM”)

**Portfolio Managers:**

<b>Name:</b>	<b>Joined Fund Management Team In:</b>	<b>Title:</b>
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

**Purchase and Redemption of Fund Shares**

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

**Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

**Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## Summary Prospectus – April 27, 2020

### JNL Aggressive Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at <http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust>. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to [ProspectusRequest@jackson.com](mailto:ProspectusRequest@jackson.com). The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

*Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website ([www.jackson.com](http://www.jackson.com)), and you will be notified by mail each time a report is posted and provided with a website link to access the report.*

*If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:*

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on [www.jackson.com](http://www.jackson.com)

*Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.*

---

**Investment Objective.** The investment objective of the Fund is capital growth.

**Expenses.** This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

#### Shareholder Fees

(fees paid directly from your investment)

Not Applicable

<b>Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)</b>	
	<b>Class A</b>
Management Fee	0.10%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses <sup>1</sup>	0.05%
Acquired Fund Fees and Expenses <sup>2</sup>	0.76%
<b>Total Annual Fund Operating Expenses</b>	<b>1.21%</b>

<sup>1</sup> "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

<sup>2</sup> Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

**Expense Example.** This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Aggressive Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$123	\$384	\$665	\$1,466

**Portfolio Turnover (% of average value of portfolio).** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	17%

**Principal Investment Strategies.** The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund’s Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

**Principal Risks of Investing in the Fund.** An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund’s portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

- Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund’s expenses and may limit the Fund’s performance.

**Performance.** The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Equity 100 Fund and JNAM Guidance – Maximum Growth Fund (together, the “Acquired Funds”), series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the Acquired Funds.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 90% MSCI All Country World Index (Net), 10% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

**Annual Total Returns as of December 31**

**Class A**

**Best Quarter (ended 9/30/2010): 12.31%; Worst Quarter (ended 9/30/2011): -15.33%**

**Portfolio Management.****Investment Adviser to the Fund:**

Jackson National Asset Management, LLC (“JNAM”)

**Portfolio Managers:**

<b>Name:</b>	<b>Joined Fund Management Team In:</b>	<b>Title:</b>
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

**Purchase and Redemption of Fund Shares**

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

**Tax Information**

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

**Payments to Broker-Dealers and Financial Intermediaries**

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

## APPENDIX A

The JNL/Goldman Sachs Managed Conservative Fund, the JNL/Goldman Sachs Managed Moderate Fund, the JNL/Goldman Sachs Managed Moderate Growth Fund, the JNL/Goldman Sachs Managed Growth Fund, the JNL/Goldman Sachs Managed Aggressive Growth Fund, and the JNL/Goldman Sachs 4 Fund are also referred to in this Prospectus as the JNL/Goldman Sachs Managed Funds. The JNL/Goldman Sachs Managed Funds do not include the JNL/Goldman Sachs Competitive Advantage Fund, the JNL/Goldman Sachs Dividend Income & Growth Fund, the JNL/Goldman Sachs Intrinsic Value Fund, the JNL/Goldman Sachs Total Yield Fund, and the JNL/Goldman Sachs International 5 Fund.

The JNL Conservative Allocation Fund, JNL Moderate Allocation Fund, JNL Moderate Growth Allocation Fund, the JNL Growth Allocation Fund, and the JNL Aggressive Growth Allocation Fund are also referred to in this Prospectus as the JNL Allocation Funds.

Certain Funds utilize a master-feeder structure.

With the exception of the JNL S&P 500 Index Fund, which only offers Class I shares, each Fund offers two classes of shares, Class A and Class I. Class A shares are described in this Prospectus.

Effective June 24, 2019, the Investment Divisions investing in the JNL/Vanguard Small Company Growth Fund (“Closed Fund”) was closed. Please refer to the contract prospectus for additional information.

Effective June 24, 2019, the JNL/Mellon Capital 10 x 10 Fund merged into the JNL/Mellon Index 5 Fund.

Effective June 24, 2019, the JNL/AQR Risk Parity Fund, a series of Jackson Variable Series Trust, merged into the JNL/T. Rowe Price Managed Volatility Balanced Fund.

Effective June 24, 2019, the JNL/BlackRock Global Long Short Credit Fund, a series of Jackson Variable Series Trust, merged into the JNL/Crescent High Income Fund.

Effective June 24, 2019, the JNL/PPM America Long Short Credit Fund, a series of Jackson Variable Series Trust, merged into the JNL/PPM America High Yield Bond Fund.

Effective June 24, 2019, the JNL/Mellon Capital JNL 5 Fund, a series of JNL Variable Fund LLC, merged into the JNL/RAFI® Multi-Factor U.S. Equity Fund, a new series of JNL Series Trust.

Effective June 24, 2019, the JNL/Mellon Capital S&P SMid 60 Fund, a series of JNL Variable Fund LLC, merged into the JNL/RAFI® Fundamental U.S. Small Cap Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/The London Company Focused U.S. Equity Fund, a series of Jackson Variable Series Trust, will merge into the JNL/Morningstar Wide Moat Index Fund.

Effective April 27, 2020, the JNL/Mellon S&P 1500 Value Index Fund will merge into the JNL/Mellon Dow<sup>SM</sup> Index Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/Mellon S&P 1500 Growth Index Fund will merge into the JNL/Mellon Nasdaq® 100 Index Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/VanEck International Gold Fund, a series of Jackson Variable Series Trust, will merge into the JNL/BlackRock Global Natural Resources Fund.

Effective April 27, 2020, the JNL/PPM America Value Equity Fund will merge into the JNL/JPMorgan Growth & Income Fund (formerly, JNL/Franklin Templeton Mutual Shares Fund).

Effective April 27, 2020, the JNL/S&P Mid 3 Fund will merge into the JNL/Mellon S&P 400 MidCap Index Fund.

Effective April 27, 2020, the JNL/Franklin Templeton Global Fund will merge into the JNL/Loomis Sayles Global Growth Fund.

Effective April 27, 2020, the JNL/Goldman Sachs Emerging Markets Debt Fund will merge into the JNL/DoubleLine® Emerging Markets Fixed Income Fund.

## APPENDIX B

Goldman Sachs is a registered service mark of Goldman, Sachs & Co.

Fidelity Institutional Asset Management is a registered service mark of FMR LLC. Used with permission.

The “Dow Jones Industrial Average”, and “The Dow 10” are products of S&P Dow Jones Indices LLC or its affiliates (“SPDJI”), and have been licensed for use. “Dow Jones®”, “Dow Jones Industrial Average”, “DJIA®”, “The Dow®” and “The Dow 10” are service and/or trademarks of Dow Jones Trademark Holdings, LLC (“Dow Jones”) and have been licensed to SPDJI and have been sub-licensed for use for certain purposes by Jackson National Life Insurance Company® (“Jackson”). The JNL/Mellon DowSM Index Fund and the JNL/Mellon Capital JNL 5 Fund (“Products”) are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, Standard & Poor’s Financial Services LLC, or any of their respective affiliates (collectively, “S&P Dow Jones Indices”). S&P Dow Jones Indices (including any of their respective affiliates) makes no representation or warranty, expressed or implied, to the owners of the Funds or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly. The only relationship of S&P Dow Jones Indices (including any of their respective affiliates) to the Funds is the licensing of certain trademarks, trade names and service marks of Dow Jones and of the “Dow Jones Industrial Average”, and “The Dow 10”, which are determined, composed and calculated by S&P Dow Jones Indices without regard to Jackson or the Products. S&P Dow Jones Indices have no obligation to take the needs of Jackson, or the owners of the Products into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the Products or the timing of the issuance or sale of the Products in the determination or calculation of the equation by which the Products are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the Products. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice.

### **Dow Jones, SPDJI and their respective affiliates do not:**

- Sponsor, endorse, sell or promote the Products.
- Recommend that any person invest in the Products.
- Have any responsibility or liability for or make any decisions about the timing, amount or pricing of the Product.
- Have any responsibility or liability for the administration, management or marketing of the Products.
- Consider the needs of the Products or the owners of the Products in determining, composing or calculating the Indexes or have any obligation to do so.

### **Dow Jones, SPDJI and their respective affiliates will not have any liability in connection with the Products. Specifically,**

- **Dow Jones, SPDJI and their respective affiliates do not make any warranty, express or implied, and Dow Jones, SPDJI and their respective affiliates disclaim any warranty about:**
  - **The results to be obtained by the Products, the owners of the Products or any other person in connection with the use of the DJIA and the data included in the Indexes;**
  - **The accuracy or completeness of the Indexes and its data;**
  - **The merchantability and the fitness for a particular purpose or use of the Indexes and its data;**
- **Dow Jones, SPDJI and/or their respective affiliates will have no liability for any errors, omissions or interruptions in the Indexes or its data;**
- **Under no circumstances will Dow Jones, SPDJI and/or their respective affiliates be liable for any lost profits or indirect, punitive, special or consequential damages or losses, even if they know that they might occur.**

**The licensing agreement relating to the use of the Indexes and trademarks referred to above by Jackson National Life Insurance Company® and SPDJI is solely for the benefit of the Products and not for any other third parties.**

S&P DOW JONES INDICES DO NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE “DOW JONES INDUSTRIAL AVERAGE”, and “THE DOW 10” OR ANY DATA INCLUDED THEREIN AND S&P DOW JONES INDICES SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. S&P DOW JONES INDICES MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE RESULTS TO BE OBTAINED BY JACKSON, OWNERS OF THE PRODUCTS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE “DOW JONES INDUSTRIAL AVERAGE”, and “THE DOW 10” OR ANY DATA INCLUDED THEREIN. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY

OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE “DOW JONES INDUSTRIAL AVERAGE”, and “THE DOW 10” OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL DOW JONES, CME OR THEIR RESPECTIVE AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

THE JNL/MELLON MSCI KLD 400 SOCIAL INDEX FUND, THE JNL/MELLON INTERNATIONAL INDEX FUND, THE JNL/MELLON EMERGING MARKETS INDEX FUND, NL/MELLON MSCI WORLD INDEX FUND, JNL/MELLON COMMUNICATION SERVICES SECTOR FUND, THE JNL/MELLON CONSUMER DISCRETIONARY SECTOR FUND, JNL/MELLON FINANCIAL SECTOR FUND, JNL/MELLON HEALTHCARE SECTOR FUND, JNL/MELLON ENERGY SECTOR FUND, THE JNL/MELLON INFORMATION TECHNOLOGY SECTOR FUND, THE JNL/MELLON CONSUMER STAPLES SECTOR FUND, THE JNL/MELLON MATERIALS SECTOR FUND, THE JNL/MELLON INDUSTRIALS SECTOR FUND, THE JNL/MELLON REAL ESTATE SECTOR FUND, OR THE JNL/MELLON UTILITIES SECTOR FUND (“MELLON FUNDS”) ARE NOT SPONSORED, ENDORSED, SOLD OR PROMOTED BY MSCI INC. (“MSCI”), ANY OF ITS AFFILIATES, ANY OF ITS INFORMATION PROVIDERS OR ANY OTHER THIRD PARTY INVOLVED IN, OR RELATED TO, COMPILING, COMPUTING OR CREATING ANY MSCI INDEX (COLLECTIVELY, THE “MSCI PARTIES”). THE MSCI INDEXES ARE THE EXCLUSIVE PROPERTY OF MSCI. MSCI AND THE MSCI INDEX NAMES ARE SERVICE MARK(S) OF MSCI OR ITS AFFILIATES AND HAVE BEEN LICENSED FOR USE FOR CERTAIN PURPOSES BY JACKSON NATIONAL ASSET MANAGEMENT, LLC. NONE OF THE MSCI PARTIES MAKES ANY REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, TO THE ISSUER OR OWNERS OF THE MELLON FUNDS OR ANY OTHER PERSON OR ENTITY REGARDING THE ADVISABILITY OF INVESTING IN FUNDS GENERALLY OR IN THE MELLON FUNDS PARTICULARLY OR THE ABILITY OF ANY MSCI INDEX TO TRACK CORRESPONDING STOCK MARKET PERFORMANCE. MSCI OR ITS AFFILIATES ARE THE LICENSORS OF CERTAIN TRADEMARKS, SERVICE MARKS AND TRADE NAMES AND OF THE MSCI INDEXES WHICH ARE DETERMINED, COMPOSED AND CALCULATED BY MSCI WITHOUT REGARD TO THE MELLON FUNDS OR THE ISSUER OR OWNERS OF THE MELLON FUNDS OR ANY OTHER PERSON OR ENTITY. NONE OF THE MSCI PARTIES HAS ANY OBLIGATION TO TAKE THE NEEDS OF THE ISSUER OR OWNERS OF THE MELLON FUNDS OR ANY OTHER PERSON OR ENTITY INTO CONSIDERATION IN DETERMINING, COMPOSING OR CALCULATING THE MSCI INDEXES. NONE OF THE MSCI PARTIES IS RESPONSIBLE FOR OR HAS PARTICIPATED IN THE DETERMINATION OF THE TIMING OF, PRICES AT, OR QUANTITIES OF THE MELLON FUNDS TO BE ISSUED OR IN THE DETERMINATION OR CALCULATION OF THE EQUATION BY OR THE CONSIDERATION INTO WHICH THE MELLON FUNDS IS REDEEMABLE. FURTHER, NONE OF THE MSCI PARTIES HAS ANY OBLIGATION OR LIABILITY TO THE ISSUER OR OWNERS OF THE MELLON CAPITAL FUNDS OR ANY OTHER PERSON OR ENTITY IN CONNECTION WITH THE ADMINISTRATION, MARKETING OR OFFERING OF THE MELLON FUNDS.

ALTHOUGH MSCI SHALL OBTAIN INFORMATION FOR INCLUSION IN OR FOR USE IN THE CALCULATION OF THE MSCI INDEXES FROM SOURCES THAT MSCI CONSIDERS RELIABLE, NONE OF THE MSCI PARTIES WARRANTS OR GUARANTEES THE ORIGINALITY, ACCURACY AND/OR THE COMPLETENESS OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES MAKES ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ISSUER OF THE MELLON FUNDS, OWNERS OF THE MELLON FUNDS, OR ANY OTHER PERSON OR ENTITY, FROM THE USE OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES SHALL HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS OF OR IN CONNECTION WITH ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. FURTHER, NONE OF THE MSCI PARTIES MAKES ANY EXPRESS OR IMPLIED WARRANTIES OF ANY KIND, AND THE MSCI PARTIES HEREBY EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WITH RESPECT TO EACH MSCI INDEX AND ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL ANY OF THE MSCI PARTIES HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, SPECIAL, PUNITIVE, CONSEQUENTIAL OR ANY OTHER DAMAGES (INCLUDING LOST PROFITS) EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

The S&P 500 Index, S&P MidCap 400 Index, and S&P SmallCap 600 Index, (collectively, the “Indices”) are products of S&P Dow Jones Indices LLC or its affiliates (“SPDJI”), and has been licensed for use by Jackson National Life Insurance Company (“Jackson”). Standard & Poor’s®, S&P® and S&P 500®, S&P MidCap 400® and S&P SmallCap 600® are registered trademarks of Standard & Poor’s Financial Services LLC; Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC (“Dow Jones”). The JNL/Mellon S&P 500 Index Fund, JNL/Mellon S&P 400 MidCap Index Fund, JNL/Mellon Small Cap Index Fund, and JNL S&P 500 Index Fund (collectively, the “Products”) are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, Standard & Poor’s Financial Services LLC, or any of their respective affiliates (collectively, “S&P Dow Jones Indices”). S&P Dow Jones Indices makes no representation or warranty, express or implied, to the owners of the Products or any member of the public regarding the advisability of investing in securities generally or in the Products particularly or the ability of the Indices to track general market performance. S&P Dow Jones Indices’ only relationship to Jackson with respect to the Indices or the Products is the licensing of the Indices and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices and/or its licensors. The Indices are determined,

composed and calculated by S&P Dow Jones Indices without regard to Jackson or the Products. S&P Dow Jones Indices have no obligation to take the needs of Jackson or the owners of the Products into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the Products or the timing of the issuance or sale of the Products in the determination or calculation of the equation by which the Products are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the Products. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to Products currently being issued by Jackson, but which may be similar to and competitive with Products. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the Index.

S&P DOW JONES INDICES DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDICES OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS IN CALCULATING THE INDICES. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY JACKSON OR OWNERS OF THE PRODUCTS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDICES OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

SPDR<sup>®</sup> is a registered trademark of Standard & Poor's Financial Services LLC.

The following applies to the JNL/Goldman Sachs Managed Growth Fund, JNL/Goldman Sachs Managed Conservative Fund, JNL/Goldman Sachs Managed Moderate Growth Fund, JNL/Goldman Sachs Managed Moderate Fund, JNL/Goldman Sachs Managed Aggressive Growth Fund, JNL/Goldman Sachs International 5 Fund, JNL/Goldman Sachs Competitive Advantage Fund, JNL/Goldman Sachs Dividend Income & Growth Fund, JNL/Goldman Sachs Intrinsic Value Fund, and JNL/Goldman Sachs Total Yield Fund.

STANDARD & POOR'S<sup>®</sup>, S&P<sup>®</sup>, S&P 500<sup>®</sup> and, S&P MIDCAP 400<sup>®</sup> are registered trademarks of S&P Global Market Intelligence Inc. or its affiliates and have been licensed for use by Jackson National Life Insurance Company. Standard & Poor's Investment Advisory Services LLC ("SPIAS") is a part of S&P Global Market Intelligence. SPIAS does not provide advice to underlying clients of the firms to which it provides services. SPIAS does not act as a "fiduciary" or as an "investment manager," as defined under ERISA, to any investor. SPIAS is not responsible for client suitability.

Programs and products of the firms to which SPIAS provides services are not endorsed, sold or promoted by SPIAS and its affiliates, and SPIAS and its affiliates make no representation regarding the advisability of investing in those programs and products. Individual investors should ultimately rely on their own judgment and/or the judgment of a representative in making their investment decisions.

SPIAS and its affiliates (collectively, S&P Global) and any third-party providers, as well as their directors, officers, shareholders, employees or agents (collectively S&P Global Parties) do not guarantee the accuracy, completeness, timeliness or availability of the Content. S&P Global Parties are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, for the results obtained from the use of the Content, or for the security or maintenance of any data input by the user. The Content is provided on an "as is" basis. S&P GLOBAL PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Global Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

While SPIAS has obtained information from sources it believes to be reliable, SPIAS does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives.

S&P Global keeps certain activities of its divisions separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain divisions of S&P Global may have information that is not available to other S&P Global divisions. S&P Global has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P Global Ratings does not contribute to or participate in the provision of investment advice. S&P Global Ratings may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P Global reserves the right to disseminate its opinions and analyses. S&P Global's public ratings and analyses are made available on its Web sites, [www.standardandpoors.com](http://www.standardandpoors.com) (free of charge), and [www.ratingsdirect.com](http://www.ratingsdirect.com) and [www.globalcreditportal.com](http://www.globalcreditportal.com) (subscription), and may be distributed through other means, including via S&P Global publications and third-party redistributors. Additional information about our ratings fees is available at [www.standardandpoors.com/usratingsfees](http://www.standardandpoors.com/usratingsfees).

S&P Global Market Intelligence and its affiliates provide a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address. SPIAS may consider research and other information from affiliates in making its investment recommendations.

The investment policies of certain model portfolios specifically state that among the information SPIAS will consider in evaluating a security are the credit ratings assigned by S&P Global Ratings. SPIAS does not consider the ratings assigned by other credit rating agencies. Credit rating criteria and scales may differ among credit rating agencies. Ratings assigned by other credit rating agencies may reflect more or less favorable opinions of creditworthiness than ratings assigned by S&P Global Ratings.

The Product(s) is not sponsored, endorsed, sold or promoted by Nasdaq, Inc. or its affiliates (Nasdaq, with its affiliates, are referred to as the "Corporations"). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to, the Product(s). The Corporations make no representation or warranty, express or implied to the owners of the Product(s) or any member of the public regarding the advisability of investing in securities generally or in the Product(s) particularly, or the ability of the Nasdaq-100<sup>®</sup> Index to track general stock market performance. The Corporations' only relationship to Jackson National Life Insurance Company ("Licensee") is in the licensing of the NASDAQ<sup>®</sup>, and Nasdaq-100<sup>®</sup> Index<sup>™</sup> registered trademarks, and certain trade names of the Corporations and the use of the Nasdaq-100<sup>®</sup> Index which is determined, composed and calculated by NASDAQ without regard to Licensee or the Product(s). Nasdaq has no obligation to take the needs of the Licensee or the owners of the Product(s) into consideration in determining, composing or calculating the Nasdaq-100<sup>®</sup> Index. The Corporations are not responsible for and have not participated in the determination of the timing of, prices at, or quantities of the Product(s) to be issued or in the determination or calculation of the equation by which the Product(s) is to be converted into cash. The Corporations have no liability in connection with the administration, marketing or trading of the Product(s).

**THE CORPORATIONS DO NOT GUARANTEE THE ACCURACY AND/OR UNINTERRUPTED CALCULATION OF THE NASDAQ-100<sup>®</sup> INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY LICENSEE, OWNERS OF THE PRODUCT(S), OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE NASDAQ-100<sup>®</sup> INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE NASDAQ-100<sup>®</sup> INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE CORPORATIONS HAVE ANY LIABILITY FOR ANY LOST PROFITS OR SPECIAL, INCIDENTAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.**

NASDAQ<sup>®</sup>, and Nasdaq-100<sup>®</sup> Index<sup>™</sup>, are registered trademarks of Nasdaq, Inc. (which with its affiliates is referred to as the "Corporations") and are licensed for use by Jackson National Life Insurance Company. The JNL/Mellon Nasdaq<sup>®</sup> 100 Index Fund has not been passed on by the Corporations as to their legality or suitability. The JNL/Mellon Nasdaq<sup>®</sup> 100 Index Fund is not issued, endorsed, sold, or promoted by the Corporations. **THE CORPORATIONS MAKE NO WARRANTIES AND BEAR NO LIABILITY WITH RESPECT TO THE JNL/MELLON NASDAQ<sup>®</sup> 100 INDEX FUND.**

Morningstar<sup>®</sup> and Wide Moat Focus<sup>SM</sup> Index are service marks of Morningstar, Inc. (Morningstar) and have been licensed for use for certain purposes by a Jackson National Asset Management, LLC ("JNAM").

JNL/Morningstar Wide Moat Index Fund is not sponsored, endorsed, sold or promoted by Morningstar. Morningstar makes no representation or warranty, express or implied, to the owners of the JNL/Morningstar Wide Moat Index Fund or any member of the public regarding the advisability of investing in securities generally or in the JNL/Morningstar Wide Moat Index Fund in particular or the ability of the Morningstar<sup>®</sup> Wide Moat Focus<sup>SM</sup> Index to track general stock market performance. Morningstar's only relationship to JNAM is the licensing of: (i) certain service marks and service names of Morningstar; and (ii) the Wide Moat Focus<sup>SM</sup> Index which is determined, composed and calculated by Morningstar without regard to JNAM or the JNL/Morningstar Wide Moat Index Fund. Morningstar has no obligation to take the needs of JNAM or the owners of JNL/Morningstar Wide Moat Index Fund into

consideration in determining, composing or calculating the Wide Moat Focus<sup>SM</sup> Index. Morningstar is not responsible for and has not participated in the determination of the prices and amount of the JNL/Morningstar Wide Moat Index Fund or the timing of the issuance or sale of the JNL/Morningstar Wide Moat Index Fund or in the determination or calculation of the equation by which the JNL/Morningstar Wide Moat Index Fund is converted into cash. Morningstar has no obligation or liability in connection with the administration, marketing or trading of the JNL/Morningstar Wide Moat Index Fund.

MORNINGSTAR DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE WIDE MOAT FOCUS<sup>SM</sup> INDEX OR ANY DATA INCLUDED THEREIN AND MORNINGSTAR SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. MORNINGSTAR MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY JNAM, OWNERS OR USERS OF THE JNL/MORNINGSTAR WIDE MOAT INDEX FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE WIDE MOAT FOCUS<sup>SM</sup> INDEX OR ANY DATA INCLUDED THEREIN. MORNINGSTAR MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE WIDE MOAT FOCUS<sup>SM</sup> INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL MORNINGSTAR HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

The JNL/RAFI<sup>®</sup> Fundamental Europe Fund, JNL/RAFI<sup>®</sup> Fundamental Asia Developed Fund, JNL/RAFI<sup>®</sup> Fundamental U.S. Small Cap Fund, and JNL/RAFI<sup>®</sup> Multi-Factor U.S. Equity Fund (the “JNL/RAFI Funds”) are not sponsored, offered, or sold in any manner by RAFI Indices, LLC or any of its affiliates, licensors or contractors (the “RAFI Parties”) nor do any of the RAFI Parties offer to any person purchasing a product that uses or incorporates a product based on an Index any express or implicit guarantee, warranty or assurance either with regard to the results of using the RAFI Multi-Factor<sup>®</sup> US Index, RAFI Fundamental US Small Index, RAFI Fundamental Europe Index, and RAFI Fundamental Asia Developed Index (each an “Index”) or the Index Price at any time or in any other respect. Each Index is calculated and published by the RAFI Parties. The RAFI Parties use commercially reasonable efforts to ensure that the Index is calculated correctly. None of the RAFI Parties shall be liable to any person purchasing a product that uses or incorporates a product based on the Index for any error, omission, inaccuracy, incompleteness, delay, or interruption in the Index or any data related thereto or have any obligation to point out errors in the Index to any person. Neither publication of each Index by the RAFI Parties nor the licensing of the Index or Index trademark for the purpose of use in connection with the JNL/RAFI Funds constitutes a recommendation by any of the RAFI Parties to invest in nor does it in any way represent an assurance, endorsement or opinion of any of the RAFI Parties with regard to any investment in the JNL/RAFI Funds. The trade names Fundamental Index<sup>®</sup> and RAFI<sup>®</sup> are registered trademarks of Research Affiliates, LLC in the US and other countries.

American Funds Insurance Series®

## Asset Allocation Fund

Summary prospectus

Class 1 shares

May 1, 2020

CAPITAL  
GROUP®

AMERICAN  
FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

**Investment objective** The fund's investment objective is to provide high total return (including income and capital gains) consistent with preservation of capital over the long term.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.27%
Other expenses	0.04
Total annual fund operating expenses	0.31

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$32	\$100	\$174	\$393

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 79% of the average value of its portfolio.

**Principal investment strategies** In seeking to pursue its investment objective, the fund varies its mix of equity securities, debt securities and money market instruments. Under normal market conditions, the fund's investment adviser expects (but is not required) to maintain an investment mix falling within the following ranges: 40%-80% in equity securities, 20%-50% in debt securities and 0%-40% in money market instruments and cash. As of December 31, 2019, the fund was approximately 65% invested in equity securities, 30% invested in debt securities and 5% invested in money market instruments and cash. The proportion of equities, debt and money market securities held by the fund varies with market conditions and the investment adviser's assessment of their relative attractiveness as investment opportunities.

The fund invests in a diversified portfolio of common stocks and other equity securities, bonds and other intermediate and long-term debt securities, and money market instruments (debt securities maturing in one year or less). The fund may invest up to 15% of its assets in common stocks and other equity securities of issuers domiciled outside the United States and up to 5% of its assets in debt securities of issuers domiciled outside the United States. In addition, the fund may invest up to 25% of its debt assets in lower quality debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds."

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline - sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

*Investing in income-oriented stocks* – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

*Investing in debt instruments* – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

*Investing in lower rated debt instruments* – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

*Investing in securities backed by the U.S. government* – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

*Liquidity risk* – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Asset allocation* – The fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The fund has selected the 60%/40% S&P 500 Index/Bloomberg Barclays Index to replace the S&P 500 Index as its broad-based securities market index. The fund's investment adviser believes that the 60%/40% S&P 500 Index/Bloomberg Barclays Index better reflects the market sectors and securities in which the fund primarily invests and the investment strategies employed by the adviser in seeking to achieve the fund's investment objective. The S&P 500 Index reflects the equity market sectors in which the fund invests. The Bloomberg Barclays U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 8/1/89)	21.54%	8.59%	10.19%	8.63%
60%/40% S&P 500 Index/Bloomberg Barclays Index (reflects no deductions for sales charges, account fees, expenses or U.S. federal income taxes)	22.18	8.37	9.77	8.60
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	31.49	11.70	13.56	9.97
Bloomberg Barclays U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.72	3.05	3.75	5.91

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
<b>Alan N. Berro</b> Co-President	20 years	Partner – Capital World Investors
<b>David A. Daigle</b>	11 years	Partner – Capital Fixed Income Investors
<b>Peter Eliot</b>	4 years	Partner – Capital International Investors
<b>Jeffrey T. Lager</b>	13 years	Partner – Capital International Investors
<b>Jin Lee</b>	2 years	Partner – Capital World Investors
<b>James R. Mulally</b>	14 years	Partner – Capital Fixed Income Investors
<b>John R. Queen</b>	4 years	Partner – Capital Fixed Income Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at [capitalgroup.com/afis](http://capitalgroup.com/afis).

**Blue Chip Income and Growth Fund**

Summary prospectus  
Class 1 shares  
May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

**Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.**

**Investment objectives** The fund's investment objectives are to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.39%
Other expenses	0.04
Total annual fund operating expenses	0.43

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$44	\$138	\$241	\$542

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 37% of the average value of its portfolio.

**Principal investment strategies** Normally, the fund invests at least 80% of its assets in dividend-paying common stocks of larger, more established companies domiciled in the United States with market capitalizations greater than \$4.0 billion. The fund's investment adviser considers these types of investments to be "blue chip" stocks. In seeking to produce a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund also ordinarily invests at least 90% of its equity assets in the stock of companies whose debt securities are rated at least investment grade by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser. The fund may invest up to 10% of its assets in equity securities of larger companies domiciled outside the United States, so long as they are listed or traded in the United States. The fund invests, under normal market conditions, at least 90% of its assets in equity securities. The fund is designed for investors seeking both income and capital appreciation.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in income-oriented stocks* – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. ## American Funds Insurance Series®

### Capital Income Builder®

Summary prospectus

Class 1 shares

May 1, 2020

**CAPITAL  
GROUP®**

**AMERICAN  
FUNDS®**

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

**Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.**

**Investment objectives** The fund has two primary investment objectives. It seeks (1) to provide a level of current income that exceeds the average yield on U.S. stocks generally and (2) to provide a growing stream of income over the years. The fund's secondary objective is to provide growth of capital.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.49%
Other expenses	0.05
Total annual fund operating expenses	0.54
Fee waiver*	0.26
Total annual fund operating expenses after fee waiver	0.28

\* The investment adviser is currently waiving a portion of its management fee equal to .26% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$29	\$147	\$276	\$652

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 72% of the average value of its portfolio.

**Principal investment strategies** The fund normally invests at least 90% of its assets in income-producing securities (with at least 50% of its assets in common stocks and other equity securities). The fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline - sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations. These risks may be heightened in the case of smaller capitalization stocks.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in income-oriented stocks* – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

*Investing in debt instruments* – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The 70%/30% MSCI ACWI/Bloomberg Barclays Index is a composite blend of 70% of the MSCI All Country World Index (ACWI) and 30% of the Bloomberg Barclays U.S. Aggregate Index and represents a broad measure of the global stock and bond markets, including market sectors in which the fund may invest. The Lipper Global Equity Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

<b>Average annual total returns</b> For the periods ended December 31, 2019:	<b>1 year</b>	<b>5 years</b>	<b>Lifetime</b>
Fund (inception date – 5/1/14)	18.16%	5.13%	4.53%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	7.74
Bloomberg Barclays U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.72	3.05	3.21
70%/30% MSCI ACWI/Bloomberg Barclays Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	21.21	6.95	6.52
Lipper Global Equity Income Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	21.01	6.20	5.38

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Alfonso Barroso	Less than 1 year	Partner – Capital Research Global Investors
Grant L. Cambridge	Less than 1 year	Partner – Capital International Investors
Joyce E. Gordon	Less than 1 year	Partner – Capital Research Global Investors
David A. Hoag	Less than 1 year	Partner – Capital Fixed Income Investors
Winnie Kwan	Less than 1 year	Partner – Capital Research Global Investors
James B. Lovelace	Less than 1 year	Partner – Capital Research Global Investors
Fergus N. MacDonald	Less than 1 year	Partner – Capital Fixed Income Investors
David M. Riley	Less than 1 year	Partner – Capital Research Global Investors
Bradley J. Vogt	Less than 1 year	Partner – Capital Research Global Investors
Steven T. Watson	2 years	Partner – Capital International Investors
Philip Winston	6 years	Partner – Capital International Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series®

## Capital World Bond Fund

Summary prospectus

Class 1 shares

May 1, 2020

**CAPITAL  
GROUP®**

**AMERICAN  
FUNDS®**

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

**Investment objective** The fund's investment objective is to provide you, over the long term, with a high level of total return consistent with prudent investment management. Total return comprises the income generated by the fund and the changes in the market value of the fund's investments.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.53%
Other expenses	0.06
Total annual fund operating expenses	0.59
Fee waiver*	0.10
Total annual fund operating expenses after fee waiver	0.49

\* The investment adviser is currently waiving a portion of its management fee equal to .10% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$50	\$179	\$319	\$728

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 159% of the average value of its portfolio.

**Principal investment strategies** Under normal market circumstances, the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by other investment instruments, including derivatives. The fund invests primarily in debt securities, including asset-backed and mortgage-backed securities and securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The fund may invest substantially in securities of issuers domiciled outside the United States, including issuers domiciled in developing countries. Normally, the fund invests substantially in investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). The fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds." The total return of the fund will be the result of interest income, changes in the market value of the fund's investments and changes in the values of other currencies relative to the U.S. dollar.

The fund may invest in certain derivative instruments. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund is nondiversified, which allows it to invest a greater percentage of its assets in any one issuer than would otherwise be the case. However, the fund intends to limit its investments in the securities of any single issuer.

Prior to May 1, 2020, the fund was called Global Bond Fund.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.**

*Market conditions* – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in debt instruments* – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

*Liquidity risk* – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

*Investing in lower rated debt instruments* – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

*Currency* – The prices of, and the income generated by, many debt securities held by the fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of the fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

*Investing in derivatives* – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

*Investing in inflation-linked bonds* – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Investing in emerging markets* – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

*Nondiversification risk* – As a nondiversified fund, the fund has the ability to invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified fund. Although the fund does not intend to limit its investments to the securities of a small number of issuers, if it were to do so, poor performance by a single large holding could adversely impact the fund's investment results more than if the fund were invested in a larger number of issuers.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper Global Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. The Consumer Price Index provides a comparison of the fund's results to inflation. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 10/4/06)	8.08%	2.54%	2.85%	4.07%
Bloomberg Barclays Global Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	6.84	2.31	2.48	3.59
Lipper Global Income Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	8.19	2.51	3.14	N/A
Consumer Price Index	2.29	1.82	1.75	1.80

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Andrew A. Cormack	1 year	Vice President – Capital Fixed Income Investors
David A. Daigle	5 years	Partner – Capital Fixed Income Investors
Thomas H. Høgh	14 years	Partner – Capital Fixed Income Investors
Robert H. Neithart	7 years	Partner – Capital Fixed Income Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at [capitalgroup.com/afis](http://capitalgroup.com/afis).

American Funds Insurance Series®

## Global Growth Fund

Summary prospectus

Class 1 shares

May 1, 2020

CAPITAL  
GROUP®

AMERICAN  
FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

**Investment objective** The fund's investment objective is to provide long-term growth of capital.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

<b>Annual fund operating expenses</b> (expenses that you pay each year as a percentage of the value of your investment)	<b>Class 1</b>
Management fee	0.52%
Other expenses	0.05
Total annual fund operating expenses	0.57

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	<b>1 year</b>	<b>3 years</b>	<b>5 years</b>	<b>10 years</b>
<b>Class 1</b>	\$58	\$183	\$318	\$714

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 14% of the average value of its portfolio.

**Principal investment strategies** The fund invests primarily in common stocks of companies around the world that the investment adviser believes have the potential for growth. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Investing in emerging markets* – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 4/30/97)	35.61%	12.01%	11.40%	10.21%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	8.79	6.47

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Patrice Collette	5 years	Partner – Capital World Investors
Paul Flynn	3 years	Partner – Capital World Investors
Jonathan Knowles	7 years	Partner – Capital World Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

**American Funds Insurance Series®**  
**Global Small Capitalization Fund**

Summary prospectus  
Class 1 shares  
May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

**Investment objective** The fund's investment objective is to provide long-term growth of capital.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

<b>Annual fund operating expenses</b> (expenses that you pay each year as a percentage of the value of your investment)	<b>Class 1</b>
Management fee	0.70%
Other expenses	0.06
Total annual fund operating expenses	0.76

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	<b>1 year</b>	<b>3 years</b>	<b>5 years</b>	<b>10 years</b>
<b>Class 1</b>	\$78	\$243	\$422	\$942

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 50% of the average value of its portfolio.

**Principal investment strategies** Normally, the fund invests at least 80% of its net assets in growth-oriented common stocks and other equity type securities of companies with small market capitalizations, measured at the time of purchase. However, the fund's holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. The investment adviser currently defines "small market capitalization" companies as companies with market capitalizations of \$6.0 billion or less. The investment adviser has periodically re-evaluated and adjusted this definition and may continue to do so in the future. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

*Investing in small companies* – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Investing in emerging markets* – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

*Liquidity risk* – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 4/30/98)	31.84%	8.95%	9.07%	9.70%
MSCI All Country World Small Cap Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	24.65	7.85	9.71	7.82

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Michael Beckwith	1 year	Vice President – Capital Research Global Investors
Bradford F. Freer	2 years	Partner – Capital Research Global Investors
Claudia P. Huntington	7 years	Partner – Capital Research Global Investors
Harold H. La	12 years	Partner – Capital Research Global Investors
Aidan O'Connell	6 years	Partner – Capital Research Global Investors
Gregory W. Wendt	8 years	Partner – Capital Research Global Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

May 1, 2020

**CAPITAL  
GROUP®**

**AMERICAN  
FUNDS®**

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

**Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.**

**Investment objective** The fund's investment objective is to provide growth of capital.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

<b>Annual fund operating expenses</b> (expenses that you pay each year as a percentage of the value of your investment)	<b>Class 1</b>
Management fee	0.32%
Other expenses	0.04
Total annual fund operating expenses	0.36

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	<b>1 year</b>	<b>3 years</b>	<b>5 years</b>	<b>10 years</b>
<b>Class 1</b>	\$37	\$116	\$202	\$456

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 21% of the average value of its portfolio.

**Principal investment strategies** The fund invests primarily in common stocks and seeks to invest in companies that appear to offer superior opportunities for growth of capital. The fund may invest up to 25% of its assets in common stocks and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

*Investing in income-oriented stocks* – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 2/8/84)	26.46%	11.68%	12.81%	11.46%
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	31.49	11.70	13.56	11.45

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Donald D. O'Neal Co-President and Trustee	15 years	Partner – Capital International Investors
Keiko McKibben Vice President	6 years	Partner – Capital Research Global Investors
Dylan Yolles Vice President	15 years	Partner – Capital International Investors
Charles E. Ellwein	5 years	Partner – Capital Research Global Investors
J. Blair Frank	14 years	Partner – Capital Research Global Investors
Claudia P. Huntington	26 years	Partner – Capital Research Global Investors
William L. Robbins	8 years	Partner – Capital International Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

## International Fund

Summary prospectus

Class 1 shares

May 1, 2020

**CAPITAL  
GROUP®**

**AMERICAN  
FUNDS®**

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

**Investment objective** The fund's investment objective is to provide long-term growth of capital.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

<b>Annual fund operating expenses</b> (expenses that you pay each year as a percentage of the value of your investment)	<b>Class 1</b>
Management fee	0.49%
Other expenses	0.06
Total annual fund operating expenses	0.55

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	<b>1 year</b>	<b>3 years</b>	<b>5 years</b>	<b>10 years</b>
<b>Class 1</b>	\$56	\$176	\$307	\$689

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 32% of the average value of its portfolio.

**Principal investment strategies** The fund invests primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser believes have the potential for growth.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

*Investing in emerging markets* – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. CAPITAL  
GROUP®

AMERICAN  
FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at [capitalgroup.com/afis](http://capitalgroup.com/afis). You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to [aficlass1@americanfunds.com](mailto:aficlass1@americanfunds.com). The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

**Investment objective** The fund's investment objective is long-term capital appreciation.

**Fees and expenses of the fund** This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.70%
Other expenses	0.07
Total annual fund operating expenses	0.77
Fee waiver*	0.18
Total annual fund operating expenses after fee waiver	0.59

\* The investment adviser is currently waiving a portion of its management fee equal to .18% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

**Example** This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$60	\$228	\$410	\$937

**Portfolio turnover** The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 38% of the average value of its portfolio.

**Principal investment strategies** The fund invests primarily in common stocks of companies with significant exposure to countries with developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets. The fund may invest in equity securities of any company, regardless of where it is based (including developed countries), if the fund's investment adviser determines that a significant portion of the company's assets or revenues (generally 20% or more) is attributable to developing countries.

Under normal market conditions, the fund invests at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The fund may also, to a limited extent, invest in securities of issuers based in nonqualified developing countries.

In determining whether a country is qualified, the fund's investment adviser considers such factors as the country's per capita gross domestic product, the percentage of the country's economy that is industrialized, market capital as a percentage of gross domestic product, the overall regulatory environment, the presence of government regulation limiting or banning foreign ownership, and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The fund's investment adviser maintains a list of qualified countries and securities in which the fund may invest.

The fund may also invest in debt securities of issuers, including issuers of lower rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as "junk bonds."

In addition, the fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, that are primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

## Principal risks

**This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.**

*Market conditions* – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

*Issuer risks* – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

*Investing in growth-oriented stocks* – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

*Investing outside the United States* – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in developing countries.

*Investing in developing countries* – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

*Investing in debt instruments* – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

*Investing in lower rated debt instruments* – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

*Liquidity risk* – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

*Investing in small companies* – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

*Management* – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

**Investment results** The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The MSCI Emerging Markets Index reflects the market sectors in which the fund invests. The J.P. Morgan Emerging Markets Bond Index (EMBI) Global Diversified reflects the bond market sectors in which the fund invests. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting [capitalgroup.com/afis](http://capitalgroup.com/afis).

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 6/17/99)	29.47%	8.20%	6.30%	8.49%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	8.79	5.15
MSCI Emerging Markets Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.42	5.61	3.68	7.43
J.P. Morgan Emerging Markets Bond Index (EMBI) Global Diversified (reflects no deductions for account fees, expenses or U.S. federal income taxes)	15.05	6.24	6.90	9.15

## Management

**Investment adviser** Capital Research and Management Company<sup>SM</sup>

**Portfolio managers** The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Carl M. Kawaja Vice President	21 years	Partner – Capital World Investors
Wahid Butt	Less than 1 year	Partner – Capital Research Global Investors
Bradford F. Freer	3 years	Partner – Capital Research Global Investors
Nicholas J. Grace	8 years	Partner – Capital Research Global Investors
Jonathan Knowles	Less than 1 year	Partner – Capital World Investors
Winnie Kwan	Less than 1 year	Partner – Capital Research Global Investors
Robert W. Lovelace	Less than 1 year	Partner – Capital International Investors
Kirstie Spence	Less than 1 year	Partner – Capital Fixed Income Investors
Tomonori Tani	2 years	Partner – Capital World Investors
Lisa Thompson	Less than 1 year	Partner – Capital International Investors
Christopher Thomsen	Less than 1 year	Partner – Capital Research Global Investors

**Purchase and sale of fund shares** Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

**Tax information** See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

**Payments to broker-dealers and other financial intermediaries** The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at [capitalgroup.com/afis](http://capitalgroup.com/afis).

# Vanguard Variable Insurance Fund Capital Growth Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at [www.vanguard.com/prospectus](http://www.vanguard.com/prospectus). You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to [online@vanguard.com](mailto:online@vanguard.com).

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

### Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

### Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

### Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

#### Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.33%
12b-1 Distribution Fee	None
Other Expenses	0.01%
Total Annual Portfolio Operating Expenses	0.34%

### Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$35	\$109	\$191	\$431

### Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 5% of the average value of its portfolio.

### Principal Investment Strategies

The Portfolio invests in stocks considered to have above-average earnings growth potential that is not reflected in their current market prices. The Portfolio consists predominantly of large- and mid-capitalization stocks.

### Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.
- *Asset concentration risk*, which is the chance that, because the Portfolio tends to invest a high percentage of assets in its ten largest holdings, the Portfolio's performance may be hurt disproportionately by the poor performance of relatively few stocks.

- *Investment style risk*, which is the chance that returns from large- and mid-capitalization growth stocks will trail returns from the overall stock market. Large- and mid-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care and information technology sectors subject the Portfolio to proportionately higher exposure to the risks of these sectors.

**An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.**

#### **Annual Total Returns**

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses, but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at [advisors.vanguard.com](http://advisors.vanguard.com) or by calling Vanguard toll-free at 800-522-5555.

### Annual Total Returns — Capital Growth Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	13.95%	March 31, 2013
Lowest	-15.36%	September 30, 2011

### Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Capital Growth Portfolio	26.50%	12.87%	14.54%
Standard & Poor's 500 Index (reflects no deduction for fees or expenses)	31.49%	11.70%	13.56%

### Investment Advisor

PRIMECAP Management Company (PRIMECAP)

#### Portfolio Managers

Theo A. Kolokotronis, Chairman of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

Joel P. Fried, President of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

Alfred W. Mordecai, Vice Chairman of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

M. Mohsin Ansari, Executive Vice President of PRIMECAP. He has co-managed the Portfolio since 2007.

James Marchetti, Executive Vice President, Portfolio Manager, and Principal of PRIMECAP. He has co-managed the Portfolio since 2015.

**Tax Information**

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

**Payments to Financial Intermediaries**

The Portfolio and its investment advisor do not pay financial intermediaries for sales of Portfolio shares.

# Vanguard Variable Insurance Fund Equity Income Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at [www.vanguard.com/prospectus](http://www.vanguard.com/prospectus). You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to [online@vanguard.com](mailto:online@vanguard.com).

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

### Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

### Investment Objective

The Portfolio seeks to provide an above-average level of current income and reasonable long-term capital appreciation.

### Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

#### Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.30%

### Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$31	\$97	\$169	\$381

### Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 33% of the average value of its portfolio.

### Principal Investment Strategies

The Portfolio invests mainly in common stocks of mid-size and large companies whose stocks typically pay above-average levels of dividend income and are, in the opinion of the purchasing advisor, undervalued relative to similar stocks. In addition, the advisors generally look for companies that they believe are committed to paying dividends consistently. Under normal circumstances, the Portfolio will invest at least 80% of its assets in equity securities. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

### Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

- *Investment style risk*, which is the chance that returns from mid- and large-capitalization dividend-paying value stocks will trail returns from the overall stock market. Mid- and large-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective.

**An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.**

#### **Annual Total Returns**

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index and a comparative benchmark, which have investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Returns for the Variable Insurance Equity Income Funds Average are derived from data provided by Lipper, a Thomson Reuters Company. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at [advisors.vanguard.com](http://advisors.vanguard.com) or by calling Vanguard toll-free at 800-522-5555.

### Annual Total Returns — Equity Income Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	13.79%	December 31, 2011
Lowest	-10.71%	September 30, 2011

### Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Equity Income Portfolio	24.43%	9.93%	12.81%
<b>Comparative Benchmarks</b> (reflect no deduction for fees or expenses)			
FTSE High Dividend Yield Index	24.24%	9.86%	12.95%
Variable Insurance Equity Income Funds Average	24.33	7.63	10.42

### Investment Advisors

Wellington Management Company LLP (Wellington Management)

The Vanguard Group, Inc. (Vanguard)

#### Portfolio Managers

W. Michael Reckmeyer, III, CFA, Senior Managing Director and Equity Portfolio Manager of Wellington Management. He has managed a portion of the Portfolio since 2007.

James P. Stetler, Senior Portfolio Manager at Vanguard. He has managed a portion of the Portfolio since 2003 (co-managed since 2012).

Binbin Guo, Ph.D., Principal of Vanguard and head of the Alpha Equity Investment team within Vanguard's Quantitative Equity Group. He has co-managed a portion of the Portfolio since 2016.

### **Tax Information**

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

### **Payments to Financial Intermediaries**

The Portfolio and its investment advisors do not pay financial intermediaries for sales of Portfolio shares.

# Vanguard Variable Insurance Fund International Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at [www.vanguard.com/prospectus](http://www.vanguard.com/prospectus). You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to [online@vanguard.com](mailto:online@vanguard.com).

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

### Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

### Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

### Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

#### Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.36%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.38%

### Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$39	\$122	\$213	\$480

### Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 14% of the average value of its portfolio.

### Principal Investment Strategies

The Portfolio invests predominantly in the stocks of companies located outside the United States and is expected to diversify its assets in countries across developed and emerging markets. In selecting stocks, the Portfolio's advisors evaluate foreign markets around the world and choose large-, mid-, and small-capitalization companies considered to have above-average growth potential. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

### Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Investment style risk*, which is the chance that returns from non-U.S. growth stocks and, to the extent that the Portfolio is invested in them, small- and mid-capitalization stocks, will trail returns from global stock markets. Historically, non-U.S. small- and mid-cap stocks have been more volatile in price than the

large-cap stocks that dominate the global markets, and they often perform quite differently.

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices. In addition, investments in foreign stocks can be riskier than U.S. stock investments. Foreign stocks may be more volatile and less liquid than U.S. stocks. The prices of foreign stocks and the prices of U.S. stocks may move in opposite directions.
- *Country/regional risk*, which is the chance that world events—such as political upheaval, financial troubles, or natural disasters—will adversely affect the value of securities issued by companies in foreign countries or regions. Because the Portfolio may invest a large portion of its assets in securities of companies located in any one country or region, including emerging markets, the Portfolio's performance may be hurt disproportionately by the poor performance of its investments in that area. Country/regional risk is especially high in emerging markets.
- *Currency risk*, which is the chance that the value of a foreign investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates. Currency risk is especially high in emerging markets.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investment in the consumer discretionary sector subjects the Portfolio to proportionately higher exposure to the risks of this sector.

**An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.**

#### **Annual Total Returns**

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index and a comparative index, which have investment characteristics similar to those of the Portfolio. The Spliced International Index reflects the performance of the MSCI EAFE Index through May 31, 2010, and the MSCI ACWI ex USA Index thereafter. MSCI ACWI ex USA Index returns are adjusted for withholding taxes. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If

such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at [advisors.vanguard.com](http://advisors.vanguard.com) or by calling Vanguard toll-free at 800-522-5555.

#### Annual Total Returns — International Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	19.66%	September 30, 2010
Lowest	-22.20%	September 30, 2011

#### Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
<b>International Portfolio</b>	31.22%	10.59%	8.70%
<b>Comparative Indexes</b> (reflect no deduction for fees or expenses)			
MSCI ACWI ex USA Index	21.51%	5.51%	4.97%
Spliced International Index	21.51	5.51	4.68

#### Investment Advisors

Baillie Gifford Overseas Ltd. (Baillie Gifford)

Schroder Investment Management North America Inc. (Schroders)

#### Portfolio Managers

James K. Anderson, Partner of Baillie Gifford & Co., which is the 100% owner of Baillie Gifford, and Head of Global Equities. He has managed a portion of the Portfolio since 2003 (co-managed since 2013).

Thomas Coutts, Partner of Baillie Gifford & Co., which is the 100% owner of Baillie Gifford, and Chief of Investment Staff. He has co-managed a portion of the Portfolio since 2016.

Simon Webber, CFA, Portfolio Manager at Schroders. He has managed a portion of the Portfolio since 2009.

#### **Tax Information**

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

#### **Payments to Financial Intermediaries**

The Portfolio and its investment advisors do not pay financial intermediaries for sales of Portfolio shares.

# Vanguard Variable Insurance Fund Small Company Growth Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at [www.vanguard.com/prospectus](http://www.vanguard.com/prospectus). You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to [online@vanguard.com](mailto:online@vanguard.com).

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

### Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

### Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

### Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

#### Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.30%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.32%

### Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$33	\$103	\$180	\$406

### Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 58% of the average value of its portfolio.

### Principal Investment Strategies

Under normal circumstances, the Portfolio invests at least 80% of its assets primarily in common stocks of small companies. These companies tend to be unseasoned but are considered by the Portfolio's advisors to have superior growth potential. Also, these companies often provide little or no dividend income. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

### Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

- *Investment style risk*, which is the chance that returns from small-capitalization growth stocks will trail returns from the overall stock market. Historically, small-cap stocks have been more volatile in price than the large-cap stocks that dominate the overall market, and they often perform quite differently. The stock prices of small companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care, industrial, and information technology sectors subject the Portfolio to proportionately higher exposure to the risks of these sectors.

**An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.**

#### **Annual Total Returns**

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at [advisors.vanguard.com](http://advisors.vanguard.com) or by calling Vanguard toll-free at 800-522-5555.

### Annual Total Returns — Small Company Growth Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	17.62%	March 31, 2019
Lowest	-20.83%	December 31, 2018

### Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
<b>Small Company Growth Portfolio</b>	28.05%	10.39%	14.29%
<b>Russell 2500 Growth Index</b> (reflects no deduction for fees or expenses)	32.65%	10.84%	14.01%

### Investment Advisors

ArrowMark Colorado Holdings, LLC (ArrowMark Partners)

The Vanguard Group, Inc. (Vanguard)

### Portfolio Managers

Chad Meade, Partner and Portfolio Manager of ArrowMark Partners. He has co-managed a portion of the Portfolio since 2016.

Brian Schaub, CFA, Partner and Portfolio Manager of ArrowMark Partners. He has co-managed a portion of the Portfolio since 2016.

James P. Stetler, Senior Portfolio Manager at Vanguard. He has managed a portion of the Portfolio since 2008 (co-managed since 2012).

Binbin Guo, Ph.D., Principal of Vanguard and head of the Alpha Equity Investment team within Vanguard's Quantitative Equity Group. He has co-managed a portion of the Portfolio since 2016.

### **Tax Information**

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

### **Payments to Financial Intermediaries**

The Portfolio and its investment advisors do not pay financial intermediaries for sales of Portfolio shares.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL Aggressive Growth Allocation Fund - Class I - April 30, 2018; JNL Conservative Allocation Fund - Class I - April 30, 2018; JNL Growth Allocation Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL Institutional Alt 25 Fund - Class I - April 30, 2018; JNL Institutional Alt 50 Fund - Class I - April 30, 2018; JNL iShares Tactical Growth Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/American Funds Capital Income Builder Fund - Class I - August 13, 2018; JNL/American Funds Global Bond Fund - Class I - April 30, 2018; JNL/American Funds Global Growth Fund - Class I - April 30, 2018; JNL/American Funds Global Small Capitalization Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

<sup>^</sup> Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

<sup>¥</sup> Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/AQR Large Cap Relaxed Constraint Equity Fund - Class I - April 30, 2018; JNL/BlackRock Advantage International Fund - Class A - June 24, 2019; JNL/BlackRock Advantage International Fund - Class I - June 24, 2019; JNL/BlackRock Global Allocation Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

<sup>^</sup> Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

<sup>¥</sup> Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/DFA U.S. Small Cap Fund - Class I - April 30, 2018; JNL/DoubleLine Core Fixed Income Fund - Class I - April 30, 2018; JNL/DoubleLine Emerging Markets Fixed Income Fund - Class A - April 25, 2016; JNL/DoubleLine Emerging Markets Fixed Income Fund - Class I - April 30, 2018; JNL/DoubleLine Shiller Enhanced CAPE Fund - Class A - September 28, 2015; JNL/DoubleLine Shiller Enhanced CAPE Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Fidelity Institutional Asset Management Total Bond Fund - Class I - April 30, 2018; JNL/First State Global Infrastructure Fund - Class I - April 30, 2018; JNL/FPA + DoubleLine Flexible Allocation Fund - Class I - April 30, 2018; JNL/Franklin Templeton Global Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Franklin Templeton Global Multisector Bond Fund - Class I - April 30, 2018; JNL/Franklin Templeton Growth Allocation Fund - Class I - April 30, 2018; JNL/Franklin Templeton Income Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

<sup>^</sup> Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

<sup>¥</sup> Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Invesco Global Real Estate Fund - Class I - August 13, 2018; JNL/Invesco International Growth Fund - Class I - April 30, 2018; JNL/Invesco Small Cap Growth Fund - Class I - April 30, 2018; JNL/JPMorgan Global Allocation Fund - Class A - June 24, 2019.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Mellon Dow Index Fund - Class I - April 30, 2018; JNL/Mellon Emerging Markets Index Fund - Class I - April 30, 2018; JNL/Mellon Energy Sector Fund - Class I - April 30, 2018; JNL/Mellon Equity Income Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Mellon MSCI KLD 400 Social Index Fund - Class A - April 24, 2017; JNL/Mellon MSCI KLD 400 Social Index Fund - Class I - April 30, 2018; JNL/Mellon MSCI World Index Fund - Class I - April 30, 2018; JNL/Mellon Nasdaq® 100 Index Fund - Class I - April 30, 2018; JNL/Mellon Real Estate Sector Fund - Class A - September 25, 2017.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/PPM America Value Equity Fund - Class I – August 13, 2018; JNL/RAFI Fundamental Asia Developed Fund - Class I - August 13, 2018; JNL/RAFI Fundamental Europe Fund - Class I - August 13, 2018. On June 24, 2019, JNL/RAFI Fundamental U.S. Small Cap Fund completed the acquisition of JNL/MC S&P SMid 60 Fund, a separate series in JNL Variable Fund LLC. JNL/MC S&P SMid 60 Fund is considered the accounting survivor for financial reporting purposes, and as a result, the Financial Highlights reflects activity of the funds formerly in JNL Variable Fund LLC for periods prior to June 24, 2019.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/S&P Managed Aggressive Growth Fund - Class I - April 30, 2018; JNL/S&P Managed Conservative Fund - Class I - April 30, 2018; JNL/S&P Managed Growth Fund - Class I - April 30, 2018; JNL/S&P Managed Moderate Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/T. Rowe Price Short-Term Bond Fund - Class I - April 30, 2018; JNL/T. Rowe Price Value Fund - Class I - April 30, 2018; JNL/The London Company Focused U.S. Equity Fund - Class I - April 30, 2018.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

# JNLNY Separate Account I

## Notes to Financial Statements

December 31, 2019

### NOTE 1. Organization

Jackson National Life Insurance Company ("Jackson") established JNLNY Separate Account I (the "Separate Account") on September 12, 1997. The Separate Account commenced operations on November 27, 1998, and is a unit investment trust registered with the Securities Exchange Commission (the "SEC") under the Investment Company Act of 1940, as amended. The Separate Account is an Investment Company and follows accounting and reporting guidance under Financial Accounting Standards Board "FASB" Accounting Standards Codification (ASC) Topic 946 Financial Services – Investment Companies.

The Separate Account is a separate investment account of Jackson, its assets legally belong to Jackson and the obligations under the contracts are the obligation of Jackson. However, the contract assets in the Separate Account are not chargeable with liabilities arising out of any other business Jackson may conduct.

The Separate Account receives and invests, based on the directions of the contract owners, net premiums for individual flexible premium variable annuity contracts issued by Jackson. The contracts can be purchased on a non-tax qualified basis or in connection with certain plans qualifying for favorable federal income tax treatment. The Separate Account contained three-hundred fifteen (315) Investment Divisions during 2019, but currently contains three-hundred three (303) Investment Divisions as of December 31, 2019. These Investment Divisions each invested in shares of the following mutual funds (collectively, the "Funds") during the year ended December 31, 2019:

JNL/PPM America Long Short Credit Fund	JNL/PPM America High Yield Bond Fund	June 24, 2019

The Net assets are affected by the investment results of each fund, equity transactions by contract owners and certain contract expenses. The accompanying financial statements include only contract owners' purchase payments pertaining to the variable portions of their contracts and exclude any purchase payments for fixed dollar benefits, the latter being included in the accounts of JNAM.

A contract owner may choose from among a number of different underlying mutual fund options. The underlying mutual fund options are not available to the general public directly. The underlying mutual funds are available as investment options in variable life insurance policies or variable annuity contracts issued by life insurance companies or, in some cases, through participation in certain qualified pension or retirement plans.

Some of the underlying mutual funds have been established by investment advisers which manage publicly traded mutual funds having similar names and investment objectives. While some of the underlying mutual funds may be similar to, and may in fact be modeled after publicly traded mutual funds, the underlying mutual funds are not otherwise directly related to any publicly traded mutual fund. Consequently, the investment performance of publicly traded mutual funds and any corresponding underlying mutual funds may differ substantially.

## JNLNY Separate Account I Notes to Financial Statements

December 31, 2019

A purchase payment could be presented as a negative equity transaction in the Statements of Changes in Net Assets if a prior period purchase payment is refunded to a contract owner due to a contract cancellation during the free look period, and /or if a gain is realized by the contract owner during the free look period.

JNAM allocates purchase payments to Investment Divisions as instructed by the contract owner. Shares of the Investment Divisions are purchased at Net Asset Value, then converted into accumulation units. Certain transactions may be subject to conditions imposed by the underlying mutual funds, as well as those set forth in the contract.

### NOTE 2. Significant Accounting Policies

The following is a summary of significant accounting policies followed by the Separate Account in the preparation of its financial statements in conformity with U.S. generally accepted accounting principles ("GAAP").

**Use of Estimates.** The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increase and decrease in net assets from operations during the reporting period. Actual results could differ from those estimates.

**Investments.** The Separate Account's Investment Divisions' investments in the corresponding Funds are stated at the closing net asset value ("NAV") of the respective Fund, which represent fair value. The average cost method is used in determining the cost of the shares sold on withdrawals by the Investment Divisions of the Separate Account. Investments in the Funds are recorded on trade date for financial reporting purposes. Realized gain distributions and dividend income distributions received from the Funds are reinvested in additional shares of the Funds and are recorded as gain or income to the Investment Divisions of the Separate Account on the ex-dividend date.

**Federal Income Taxes.** The operations of the Separate Account are taxed as part of the operations of Jackson, which is taxed as a "life insurance company" under the provisions of the Internal Revenue Code. Under current law, no federal income taxes are payable with respect to the Separate Account. Therefore, no federal income tax provision is required. Taxes are generally the responsibility of the contract owner upon termination or withdrawal.

**FASB ASC Topic 820, "Fair Value Measurement".** As of December 31, 2019, all of the Separate Account's Investment Divisions' investment in each of the corresponding Funds are valued at the daily reported net asset value ("NAV") of the applicable Underlying Fund. Investments in the Underlying Funds are categorized as Level 1 within FASB ASC Topic 820 fair value hierarchy. On each valuation date, the NAV of each corresponding Fund is generally determined once each day on which the New York Stock Exchange ("NYSE") is open, at the close of the regular trading session of the NYSE (generally, 4:00 PM Eastern Time). The characterization of the underlying securities held by the Funds in accordance with FASB ASC Topic 820 differs from the characterization of the Separate Account's Investment Divisions' investment in the corresponding Funds. Although there can be no assurance, in general, the fair value of the investment is the amount the owner of such investment might reasonably expect to receive in an orderly transaction between market participants upon its current sale.

### NOTE 3. Contract Charges

Under the term of the contracts, certain charges are allocated to the contract owner to compensate Jackson for providing the insurance benefits set forth in the contracts, administering the contracts, distributing the contracts, and assuming certain risks in connection with the contracts. These charges result in a reduction in contract unit value or redemptions of contract units in the number of contract units outstanding.

**Contract Owner Charges.** The following charges are assessed to the contract owner by redemption of contract units outstanding:

**Contract Maintenance Charge.** An annual contract maintenance charge of \$30 - \$240 is charged against each contract to reimburse Jackson for expenses incurred in establishing and maintaining records relating to the contract. The contract maintenance charge is assessed on each anniversary of the contract date that occurs prior to the annuity date or in conjunction with a total withdrawal, as applicable. This charge is only imposed if the contract value is less than \$50,000 on the date when the charge is assessed. The charge is deducted by redemption of contract units.

**Transfer Charge.** A transfer charge of \$25 will apply to transfers made by contract owners between the Investment Divisions in excess of 15 transfers in a contract year. Contract year is defined as the succeeding twelve months from the contract issue date. Jackson may waive the transfer charge in connection with pre-authorized automatic transfer programs, or in those states where a lesser charge is required. This charge will be deducted from the amount transferred prior to the allocation to a different Investment Division.

**Surrender or Contingent Deferred Sales Charge.** During the first seven contract years, certain contracts include a provision for a charge upon the surrender or partial surrender of the contract. The amount assessed under the contract terms, if any, depends upon the cost associated with distributing the particular contract. The amount, if any, is determined based on a number of factors, including the amount withdrawn, the contract year of surrender, or the number and amount of withdrawals in a calendar year. The surrender charges are assessed by Jackson and withheld from the proceeds of the withdrawals.

**Guaranteed Minimum Optional Benefit Charges.** The following contract owner charges are guaranteed minimum optional benefit charges:

## JNLNY Separate Account I Notes to Financial Statements

December 31, 2019

**Guaranteed Minimum Income Benefit Charge.** If this benefit has been selected, Jackson will assess an annual charge of 0.30% to 0.90%, depending on the contract, of the Guaranteed Minimum Income Benefit ("GMIB") base. The charge will be deducted each calendar quarter from the contract value by redemption of contract units.

**Guaranteed Minimum Withdrawal Benefit Charge.** If this benefit has been selected, Jackson will assess an annual charge of 0.51% to 3.00%, depending on the contract of the Guaranteed Withdrawal Balance ("GWB"). The charge will be deducted each calendar quarter from the contract value by redemption of contract units.

**Guaranteed Minimum Death Benefit Charge.** If any of the optional death benefits are selected that are available under the contract, Jackson will assess an annual charge of 0.20% to 1.44%, depending on the contract of the Death Benefit base. The charge will be deducted each contract quarter from the contract value by redemption of contract units.

**Asset-based Charges.** The following charges are assessed to the contract owner by a reduction in contract unit value:

**Insurance Charges.** Jackson deducts a daily charge for administrative expenses from the net assets of the Separate Account equivalent to an annual rate of 0.05% - 0.15%. In designated products, this expense is waived for contracts valued greater than \$1 million, refer to the product prospectus for eligibility. The administration charge is designed to reimburse Jackson for expenses incurred in administering the Separate Account and its contracts and reduces the contract unit value.

Jackson deducts a daily base contract charge from the net assets of the Separate Account equivalent to an annual rate of 0.30% to 1.65% for the assumption of mortality and expense risks. The mortality risk assumed by Jackson is that the insured may receive benefits greater than those anticipated by Jackson. The expense risk assumed by Jackson is that the actual cost of administering the contracts of the Separate Account may exceed the amount received from the Administration Charge and the Contract Maintenance Charge.

**Optional Benefit Charges.** The following contract owner charges are optional benefit charges:

**Contract Enhancement Charge.** If one of the contract enhancement benefits is selected, then for a period of three to seven contract years, Jackson will make an additional deduction based upon the average daily net assets of the contract owner's allocations to the Investment Divisions. The amounts of these charges depend upon the contract enhancements selected and range from 0.395% to 0.65%.

**Withdrawal Charge Period.** If the optional three, four, or five-year withdrawal charge period feature is selected, Jackson will deduct 0.45%, 0.40%, or 0.30%, respectively, on an annual basis of the average daily net assets of the contract owner's allocations to the Investment Divisions.

**20% Additional Free Withdrawal Charge.** If a contract owner selects the optional feature that permits you to withdraw up to 20% of premiums that are still subject to a withdrawal charge minus earnings during a contract year without withdrawal charge, Jackson will deduct 0.30% on an annual basis of the average daily net assets of the contract owner's allocations to the Investment Divisions.

**Optional Death Benefit Charges.** If any of the optional death benefits are selected that are available under the contract, Jackson will make an additional deduction of 0.15% to 0.55% on an annual basis of the average daily net assets the contract owner's allocations to the Investment Divisions, based on the optional death benefit selected.

**Premium Taxes.** Some states and other governmental entities charge premium taxes or other similar taxes. Jackson pays these taxes and may make a deduction from the value of the contract for them. Premium taxes will not exceed 2.0%. Currently, New York does not impose premium taxes.

### **NOTE 4. Related Party Transactions**

For contract enhancement benefits related to the optional benefits offered, Jackson contributed \$12,328 and \$33,405 to the Separate Account in the form of additional premium to contract owners' accounts for the years ended December 31, 2019 and 2018, respectively. These amounts are included in purchase payments from contract transactions.

Contract owners may, with certain restrictions, transfer their assets between the Separate Account and a fixed dollar contract (fixed account) maintained in the accounts of Jackson. These transfers are the result of the contract owner executing fund exchanges. Fund exchanges from the Separate Account to the fixed account are included in transfers between investment divisions, and fund exchanges from the fixed account to the Separate Account are included in purchase payments, as applicable, on the accompanying Statements of Changes in Net Assets.

### **NOTE 5. Subsequent Events**

Management has evaluated subsequent events for the Separate Accounts through the date the financial statements are issued and has concluded there are no events that require adjustments to the financial statements or disclosure in the notes.

## Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Jackson National Life Insurance Company of New York and Contract Owners of JNLNY Separate Account I:

### *Opinion on the Financial Statements*

We have audited the accompanying statements of assets and liabilities of the Investment Divisions listed in the Appendix that comprise the JNLNY Separate Account I (the Separate Account) as of the date listed in the Appendix, the related statements of operations for the year or period listed in the Appendix and changes in net assets for the years or periods listed in the Appendix, and the related notes (collectively, the financial statements) and the financial highlights for each of the years or periods indicated therein. In our opinion, the financial statements and financial highlights present fairly, in all material respects, the financial position of each Investment Division as of the date listed in the Appendix, the results of its operations for the year or period listed in the Appendix, the changes in its net assets for the years or periods listed in the Appendix, and the financial highlights for each of the years or periods indicated therein, in conformity with U.S. generally accepted accounting principles.

### *Basis for Opinion*

These financial statements and financial highlights are the responsibility of the Separate Account's management. Our responsibility is to express an opinion on these financial statements and financial highlights based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Separate Account in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and financial highlights are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements and financial highlights, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements and financial highlights. Such procedures also included confirmation of securities owned as of December 31, 2019, by correspondence with the transfer agent of the underlying mutual funds or by other appropriate auditing procedures. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements and financial highlights. We believe that our audits provide a reasonable basis for our opinion.

**KPMG LLP**

We have served as the auditor of one or more of Jackson National Life Insurance Company's Separate Accounts since 1999.

## Report of Independent Registered Public Accounting Firm

To the Stockholder and Board of Directors  
Jackson National Life Insurance Company of New York:

### *Opinion on the Financial Statements*

We have audited the accompanying balance sheets of Jackson National Life Insurance Company of New York (the Company) as of December 31, 2019 and 2018, the related statements of income, comprehensive income, stockholder's equity, and cash flows for each of the years in the three-year period ended December 31, 2019, and the related notes (collectively, the financial statements). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2019 and 2018, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 2019, in conformity with U.S. generally accepted accounting principles.

### *Basis for Opinion*

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB and in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits, we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/ KPMG LLP

We have served as the Company's auditor since 1999.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**

**December 31, 2019 and 2018**

---

**1. Business and Basis of Presentation**

Jackson National Life Insurance Company of New York, (the “Company” or “Jackson-NY”) is wholly owned by Jackson National Life Insurance Company (“Jackson” or the “Parent”), a wholly owned subsidiary of Brooke Life Insurance Company (“Brooke Life”), which is ultimately a wholly owned subsidiary of Prudential plc (“Prudential”), London, England. Jackson-NY is licensed to sell group and individual annuity products (including immediate annuities, deferred fixed annuities and variable annuities), guaranteed investment contracts and individual life insurance products, including variable universal life, in the states of New York, Delaware, and Michigan.

**Basis of Presentation**

The accompanying financial statements have been prepared in accordance with U.S. generally accepted accounting principles (“GAAP”).

The preparation of the financial statements in conformity with GAAP requires the use of estimates and assumptions about future events that affect the amounts reported in the financial statements and the accompanying notes. Significant estimates or assumptions, as further discussed in the notes, include: 1) valuation of investments, including fair values of securities deemed to be in an illiquid market and the determination of when an impairment is other-than-temporary; 2) assumptions impacting estimated future gross profits, including but not limited to, policyholder behavior, mortality rates, expenses, investment returns and policy crediting rates, used in the calculation of amortization of deferred acquisition costs and deferred sales inducements; 3) assumptions used in calculating policy reserves and liabilities, including but not limited to, policyholder behavior, mortality rates, expenses, investment returns and policy crediting rates; 4) assumptions as to future earnings levels being sufficient to realize deferred tax benefits; 5) estimates related to liabilities for lawsuits, contingencies and other accruals; 6) assumptions and estimates associated with the Company’s tax positions, including an estimate of the dividends received deduction, which impact the amount of recognized tax benefits recorded by the Company; and 7) value of guaranteed benefits. These estimates and assumptions are based on management’s best estimates and judgments. Management evaluates its estimates and assumptions on an ongoing basis using historical experience and other factors deemed appropriate. As facts and circumstances dictate, these estimates and assumptions may be adjusted. Since future events and their effects cannot be determined with precision, actual results could differ significantly from these estimates. Changes in estimates, including those resulting from continuing changes in the economic environment, will be reflected in the financial statements in the periods the estimates are changed.

**2. Summary of Significant Accounting Policies**

**Changes in Accounting Principles – Adopted in Current Year**

In March 2017, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update (“ASU”) No. 2017-08, “Receivables – Nonrefundable Fees and Other Costs: Premium Amortization on Purchased Callable Debt Securities,” which requires that certain premiums on callable debt securities be amortized to the earliest call date. Effective January 1, 2019, the Company adopted ASU No. 2017-08 with no impact on the Company’s financial statements.

**Changes in Accounting Principles – Issued but Not Yet Adopted**

In August 2018, the FASB issued ASU No. 2018-15, “Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement that is a Service Contract,” which align the requirements for capitalizing implementation costs incurred in a hosting arrangement that is a service contract with the requirements for capitalizing implementation costs incurred to develop or obtain internal-use software. ASU No. 2018-15 is effective for fiscal years beginning after December 15, 2019 and can be applied either retrospectively or prospectively to all implementation costs incurred after the date of adoption. Early adoption is permitted. The adoption of ASU No. 2018-15 is not expected to have a material impact on the Company’s financial statements.

In August 2018, the FASB issued ASU No. 2018-13, “Changes to the Disclosure Requirements for Fair Value Measurements,” which modifies the disclosure requirements on fair value measurements. ASU No. 2018-13 is effective for fiscal years beginning after December 15, 2019. Early adoption is permitted, with the option to early adopt any removed or modified disclosures while delaying adoption of the new disclosures until the effective date. Certain amendments are required to be applied prospectively for only the most recent annual period presented, where

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

---

other amendments are to be applied retrospectively to all periods presented. Upon adoption in 2020, the Company will revise the impacted disclosures within the Company's financial statements.

In August 2018, the FASB issued ASU No. 2018-12, "Targeted Improvements to the Accounting for Long Duration Contracts," which includes changes to the existing recognition, measurement, presentation and disclosure requirements for long-duration contracts issued by an insurance entity. The amendments in this Update contain four significant changes: 1) For the calculation of the liability for future policy benefits of nonparticipating traditional and limited-payment insurance and reinsurance contracts, cash flow assumptions and discount rates will be required to be updated at least annually; 2) Market risk benefits, a new term for certain contracts or features that provide for potential benefits in addition to the account balance which exposes the insurer to other than nominal market risk, will be measured at fair value; 3) deferred acquisition costs ("DAC") will be amortized on a constant-level basis, independent of profitability; and 4) enhanced disclosures, including quantitative information in rollforwards for balance sheet accounts, as well as information about significant inputs, judgments, assumptions and methods used in measurement. ASU No. 2018-12 is effective for fiscal years beginning after December 15, 2021, with required retrospective application to January 1, 2020. Early adoption is permitted. Given the nature and extent of the required changes, the adoption of this standard is expected to have a significant impact on the Company's financial statements and disclosures. In addition to the initial balance sheet impact upon adoption, the Company also expects a change in the pattern of future profit emergence.

In June 2016, the FASB issued ASU No. 2016-13, "Financial Instruments – Credit Losses: Measurement of Credit Losses on Financial Instruments," which provides a new current expected credit loss ("CECL") model to account for credit losses on certain financial assets and off-balance sheet exposures. The model requires an entity to estimate lifetime credit losses related to such financial assets and exposures based on relevant information about past events, current conditions, and reasonable and supportable forecasts that affect the collectability of the reported amount. The guidance also modifies the current other-than-temporary impairment guidance for available-for-sale debt securities to require the use of an allowance rather than a direct write down of the investment, and replaces existing guidance for purchased credit deteriorated loans and debt securities. The guidance also requires enhanced disclosures. ASU No. 2016-13 is effective for public entities that meet the definition of an SEC filer for annual reporting periods beginning after December 15, 2019. While the final methodology for the reinsurance receivable CECL allowance is still under development, the allowance is not expected to be material. The Company plans to adopt the standard on its effective date of January 1, 2020, with a cumulative effect adjustment to retained earnings.

**Variable Annuity Reinsurance Agreement Amendment**

Effective December 31, 2016, Jackson-NY amended its variable annuity reinsurance agreement with Jackson.

Prior to the amendment, the agreement ceded to Jackson 90% of the guaranteed minimum withdrawal benefits liability associated with variable annuity contracts issued by Jackson-NY. The purpose of the amendment was to transfer to Jackson 90% of the total variable annuity contract risk associated with variable annuities issued by Jackson-NY. This transfer allows for better alignment with risk mitigation strategies employed at the parent company level.

The amendment of the treaty allows for 90% of the entire variable annuity contract to be ceded to Jackson on a coinsurance basis (modified coinsurance for Separate Account liabilities) and covers all existing and future issues of variable annuity contracts issued by Jackson-NY.

This transaction resulted in a deferred gain of \$242.9 million, ceded reserves of \$1,148.9 million, which were reported in reinsurance recoverable, net and a payable to parent of \$905.9 million. Additionally, as the underlying business is no longer retained, deferred acquisition costs of \$341.0 million and deferred sales inducements of \$0.7 million were written off. The deferred gain will be amortized into income over the life of the business, which is estimated to be 10 years.

The amendment was "non-disapproved" by the insurance departments of Michigan and New York, and the payable to parent was settled in 2017, through a transfer of \$762.3 million in securities and the remainder in cash.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**

**December 31, 2019 and 2018**

---

**Comprehensive Income**

Comprehensive income includes all changes in stockholder's equity (except those arising from transactions with owner/stockholder) and, in the Company's case, includes net income and net unrealized gains or losses on available for sale debt securities.

**Investments**

Debt securities consist primarily of bonds and asset-backed securities. Acquisition discounts and premiums on debt securities are amortized into investment income through call or maturity dates using the effective interest method. Discounts and premiums on asset-backed securities are amortized over the estimated redemption period. Certain asset-backed securities are considered to be other than high quality or otherwise deemed to be high-risk, meaning the Company might not recover substantially all of its recorded investment due to unanticipated prepayment events. For these securities, changes in investment yields due to changes in estimated future cash flows are accounted for on a prospective basis. The carrying value of such securities was \$5.6 million and \$9.1 million as of December 31, 2019 and 2018, respectively.

Debt securities are classified as available for sale and are carried at fair value. For declines in fair value considered to be other-than-temporary, an impairment charge reflecting the difference between the amortized cost basis and fair value is included in net realized losses on investments. If management believes the Company does not intend to sell the security and is not more likely than not to be required to sell the security prior to recovery of its amortized cost basis, an amount representing the non-credit related portion of a loss is reclassified out of net realized losses on investments and into other comprehensive income. In determining whether an other-than-temporary impairment has occurred, and in calculating the non-credit related component of the total impairment loss, the Company considers a number of factors, which are further described in Note 3.

Equity securities are carried at fair value with changes in value included in net investment income.

Policy loans are loans the Company issues to contract holders that use the cash surrender value of their life insurance policy or annuity contract as collateral.

Realized gains and losses on sales of investments are recognized in income at the date of sale and are determined using the specific cost identification method.

The changes in unrealized gains and losses on certain investments that are classified as available for sale and the non-credit related portion of other-than-temporary impairment charges are excluded from net income and included as a component of other comprehensive income and stockholder's equity, net of tax, and the effect of the adjustment for deferred acquisition costs and deferred sales inducements.

**Embedded Derivatives**

Certain guarantees offered in connection with variable annuities issued by the Company contain embedded derivatives as defined by current accounting guidance. These derivatives, embedded in certain host liabilities that have been separated for accounting and financial reporting purposes, are carried at fair value. Jackson-NY's guaranteed minimum income benefit ("GMIB") book is reinsured through an unrelated party, and due to the net settlement provisions of the reinsurance agreement, this contract meets the definition of a derivative. Accordingly, the GMIB reinsurance agreement is recorded at fair value. Guaranteed minimum withdrawal benefits ("GMWB") associated with variable annuities are reinsured through the contract that Jackson-NY has with its Parent. The direct GMWB reserve and related ceded reserves are also considered an embedded derivative and are carried at fair value. Further details regarding the fair values of these items are included in Note 4 and details regarding the reinsurance agreement are included in Note 6. Embedded derivative results are reported in death, other policy benefits and change in policy reserves.

**Cash and Cash Equivalents**

Cash and cash equivalents primarily include money market instruments and bank deposits.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

---

**Fair Value Measurement**

Fair value measurements are based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect the Company's view of market assumptions in the absence of observable market information. The Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. All financial assets and liabilities measured at fair value are required to be classified into one of the following categories:

- Level 1      Observable inputs that reflect quoted prices for identical assets or liabilities in active markets that the Company has the ability to access at the measurement date. Level 1 securities include U.S. Treasury securities and exchange traded equity securities.
  
- Level 2      Observable inputs, other than quoted prices included in Level 1, for the asset or liability or prices for similar assets and liabilities. Most debt securities that are model priced using observable inputs are classified within Level 2.
  
- Level 3      Valuations that are derived from techniques in which one or more of the significant inputs are unobservable (including assumptions about risk). Embedded derivatives that are valued using unobservable inputs are included in Level 3. Because Level 3 fair values, by their nature, contain unobservable market inputs, considerable judgment may be used to determine the Level 3 fair values. Level 3 fair values represent the Company's best estimate of an amount that could be realized in a current market exchange absent actual market exchanges.

In many situations, inputs used to measure the fair value of an asset or liability may fall into different levels of the fair value hierarchy. In these situations, the Company determines the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value. As a result, both observable and unobservable inputs may be used in the determination of fair values that the Company has classified within Level 3.

The Company determines the fair values of certain financial assets and liabilities based on quoted market prices, where available. The Company may also determine fair value based on estimated future cash flows discounted at the appropriate current market rate. When appropriate, fair values reflect adjustments for counterparty credit quality, the Company's credit standing, liquidity and risk margins on unobservable inputs.

Where quoted market prices are not available, fair value estimates are made at a point in time, based on relevant market data, as well as the best information about the individual financial instrument. At times, illiquid market conditions may result in inactive markets for certain of the Company's financial instruments. In such instances, there may be no or limited observable market data for these assets and liabilities. Fair value estimates for financial instruments deemed to be in an illiquid market are based on judgments regarding current economic conditions, liquidity discounts, currency, credit and interest rate risks, loss experience and other factors. These fair values are estimates and involve considerable uncertainty and variability as a result of the inputs selected and may differ materially from the values that would have been used had an active market existed. As a result of market inactivity, such calculated fair value estimates may not be realizable in an immediate sale or settlement of the instrument. In addition, changes in the underlying assumptions used in the fair value measurement technique could significantly affect these fair value estimates.

Refer to Note 4 for further discussion of the methodologies used to determine fair values of the Company's financial instruments.

**Deferred Acquisition Costs**

Under current accounting guidance, certain costs that are directly related to the successful acquisition of new or renewal insurance business can be capitalized as deferred acquisition costs. These costs primarily pertain to commissions and certain costs associated with policy issuance and underwriting. All other acquisition costs are expensed as incurred.

Deferred acquisition costs are increased by interest thereon and amortized into income in proportion to anticipated premium revenues for traditional life policies and in proportion to estimated gross profits, including realized gains and losses and embedded derivative movements, for annuities and interest-sensitive life products. Due to volatility of certain factors that affect gross profits, including realized capital gains and losses and embedded derivative movements,

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**

**December 31, 2019 and 2018**

---

amortization may be a benefit or a charge in any given period. In the event of negative amortization, the related deferred acquisition cost balance is capped at the initial amount capitalized, plus interest. Unamortized deferred acquisition costs are written off when a contract is internally replaced and substantially changed.

As certain available for sale debt securities are carried at fair value, an adjustment is made to deferred acquisition costs equal to the change in amortization that would have occurred if such securities had been sold at their stated fair value and the proceeds reinvested at current yields. This adjustment, along with the change in net unrealized gains (losses) on available for sale debt securities, net of applicable tax, is credited or charged directly to stockholder's equity as a component of other comprehensive income. At December 31, 2019 and 2018, deferred acquisition costs (decreased) increased by \$(16.0) million and \$6.5 million, respectively, to reflect this adjustment.

For variable annuity business, the Company employs a mean reversion methodology that is applied with the objective of adjusting the amortization of deferred acquisition costs that would otherwise be highly volatile due to fluctuations in the level of future gross profits arising from changes in equity market levels. The mean reversion methodology achieves this objective by applying a dynamic adjustment to the assumption for short-term future investment returns. Under this methodology, the projected returns for the next five years are set such that, when combined with the actual returns for the current and preceding two years, the average rate of return over the eight year period is 7.4%, after investment management fees for both 2019 and 2018. The mean reversion methodology does, however, include a cap and a floor of 15% and 0% per annum, respectively, on the projected return for each of the next five years. At December 31, 2019 and 2018, projected returns under mean reversion were within the range bounded by the 15% cap and 0% floor. At December 31, 2019 and 2018, projected returns after the next five years were set at 7.4%.

Deferred acquisition costs are reviewed periodically to ensure that the unamortized portion does not exceed the expected recoverable amounts. Any amount deemed unrecoverable is written off with a charge through deferred acquisition costs amortization. No such write-offs were required for 2019, 2018 and 2017.

#### **Deferred Sales Inducements**

Under current accounting guidance, certain sales inducement costs that are directly related to the successful acquisition of new or renewal insurance business can be capitalized as deferred sales inducement costs. Bonus interest on deferred fixed annuities and contract enhancements on variable annuities are capitalized as deferred sales inducements. Deferred sales inducements are increased by interest thereon and amortized into income in proportion to estimated gross profits, including realized capital gains and losses and embedded derivative movements. Due to volatility of certain factors that affect gross profits, including realized capital gains and losses and embedded derivative movements, amortization may be a benefit or a charge in any given period. In the event of negative amortization, the related deferred sales inducements balance is capped at the initial amount capitalized, plus interest. Unamortized deferred sales inducements are written off when a contract is internally replaced and substantially changed.

As certain available for sale debt securities are carried at fair value, an adjustment is made to deferred sales inducements equal to the change in amortization that would have occurred if such securities had been sold at their stated fair value and the proceeds reinvested at current yields. This adjustment, along with the change in net unrealized gains (losses) on available for sale debt securities, net of applicable tax, is credited or charged directly to stockholder's equity as a component of other comprehensive income. At December 31, 2019 and 2018, deferred sales inducements (decreased) increased by \$(0.6) million and \$0.3 million, respectively, to reflect this adjustment.

For variable annuity business, the Company employs the same mean reversion methodology as is employed for deferred acquisition costs as described above.

Deferred sales inducements are reviewed periodically to ensure that the unamortized portion does not exceed the expected recoverable amounts. Any amount deemed unrecoverable is written off with a charge through deferred sales inducements amortization. No such write-offs were required for 2019, 2018, and 2017.

#### **Actuarial Assumption Changes (Unlocking)**

Annually, or as circumstances warrant, the Company conducts a comprehensive review of the assumptions used for its estimates of future gross profits underlying the amortization of deferred acquisition costs and deferred sales inducements, as well as the valuation of the embedded derivatives and reserves for life insurance and annuity products

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**  
**December 31, 2019 and 2018**

---

with living benefit and death benefit guarantees. These assumptions include, but may not be limited to, policyholder behavior, mortality rates, expenses, investment returns and policy crediting rates. Based on this review, the cumulative balances of deferred acquisition costs, deferred sales inducements and life and annuity guaranteed benefit reserves are adjusted with a corresponding benefit or charge to net income.

**Reinsurance**

The Company enters into ceded reinsurance agreements with other companies in the normal course of business. Reinsurance agreements are reported on a gross basis on the Company's balance sheets as an asset for amounts recoverable from reinsurers or as a component of other liabilities for amounts, such as premiums, owed to reinsurers. Reinsurance ceded premiums and benefits provided are accounted for on bases consistent with those used in accounting for the original policies issued and the terms of the reinsurance contracts. Premium income and benefit expenses are reported net of insurance ceded.

**Federal Income Taxes**

The Company files a consolidated federal income tax return with Jackson, Brooke Life, and Squire Reassurance Company II, Inc. The Company has entered into a written tax sharing agreement, which is based on separate return calculations. Intercompany balances are settled on a quarterly basis.

Deferred federal income taxes arise from the recognition of temporary differences between the basis of assets and liabilities determined for financial reporting purposes and the basis determined for income tax purposes. Such temporary differences are principally related to the effects of recording certain invested assets at market value, the deferral of policy acquisition costs and sales inducements and the provisions for future policy benefits and expenses. Deferred tax assets and liabilities are measured using the tax rates expected to be in effect when such benefits are realized. Jackson-NY is required to test the value of deferred tax assets for realizability. Deferred tax assets are reduced by a valuation allowance if, based on the weight of available positive and negative evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. In determining the need for a valuation allowance, the Company considers the carryback eligibility of losses, reversal of existing temporary differences, estimated future taxable income and tax planning strategies.

The determination of the valuation allowance for Jackson-NY's deferred tax assets requires management to make certain judgments and assumptions regarding future operations that are based on historical experience and expectations of future performance. In order to recognize a tax benefit in the financial statements, there must be a greater than fifty percent chance of success of the Company's position being sustained by the relevant taxing authority with regard to that tax position. Management's judgments are potentially subject to change given the inherent uncertainty in predicting future performance, which is impacted by such factors as policyholder behavior, competitor pricing and other specific industry and market conditions.

The Company recognizes accrued interest and penalties, if any, related to unrecognized tax benefits as a component of tax expense.

**Deferred Gain on Reinsurance**

As discussed above, Jackson-NY amended its variable annuity reinsurance agreement with Jackson in 2016. The original agreement resulted in a deferred gain of \$0.9 million in 2009, which is being amortized into income over the life of the business. The reinsurance agreement amendment in 2016 resulted in an initial gain to Jackson-NY of \$242.9 million, which was deferred and will be amortized into income over the life of the business.

**Reserves for Future Policy Benefits and Claims Payable and Other Contract Holder Funds**

For traditional life insurance contracts, which include term and whole life, reserves for future policy benefits are determined using the net level premium method and assumptions as of the issue date or acquisition date as to mortality, interest, persistency and expenses plus provisions for adverse deviations. These assumptions are not unlocked unless the reserve is determined to be deficient. Interest rate assumptions range from 3.5% to 6.0%. Lapse, mortality, and expense assumptions for recoverability are based primarily on Company experience in combination with that of its Parent. The Company's liability for future policy benefits also includes net liabilities for guaranteed benefits related to certain nontraditional long-duration life and annuity contracts, which are further discussed in Note 8.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**

**December 31, 2019 and 2018**

---

For the Company's interest-sensitive life contracts, liabilities approximate the policyholder's account value. For fixed deferred annuities and the fixed option on variable annuity contracts, the liability is the policyholder's account value.

**Contingent Liabilities**

The Company is a party to legal actions and, at times, regulatory investigations. Given the inherent unpredictability of these matters, it is difficult to estimate their impact on the Company's financial position. A reserve is established for contingent liabilities if it is probable that a loss has been incurred and the amount is reasonably estimable. It is possible that an adverse outcome in certain of the Company's contingent liabilities, or the use of different assumptions in the determination of amounts recorded, could have a material effect upon the Company's financial position. However, it is the opinion of management that the ultimate disposition of contingent liabilities is unlikely to have a material adverse effect on the Company's financial position.

**Separate Account Assets and Liabilities**

The Company maintains separate account assets associated with variable life and annuity contracts, which are reported at fair value. The related liabilities are reported at an amount equivalent to the separate account assets. Investment risks associated with market value changes are borne by the contract holders, except to the extent of minimum guarantees made by the Company. Refer to Note 8 for additional information regarding the Company's contractual guarantees. Separate account net investment income, net investment realized and unrealized gains and losses, and the related liability changes are offset within the same line item in the income statements. Amounts assessed against the contract holders for mortality, variable annuity benefit guarantees, administrative, and other services are reported in revenue as fee income.

**Revenue and Expense Recognition**

Premiums for traditional life insurance are reported as revenues when due. Benefits, claims and expenses are associated with earned revenues in order to recognize profit over the lives of the contracts. This association is accomplished through provisions for future policy benefits and the deferral and amortization of certain acquisition costs.

Deposits on interest-sensitive life products and investment contracts, principally universal and variable universal life contracts and deferred annuities, are treated as policyholder deposits and excluded from revenue. Revenues consist primarily of investment income and charges assessed against the account value for mortality charges, surrenders, variable annuity benefit guarantees and administrative expenses. Surrender benefits are treated as repayments of the policyholder account. Annuity benefit payments are treated as reductions to the policyholder account. Death benefits in excess of the policyholder account are recognized as an expense when incurred. Expenses consist primarily of the interest credited to policyholder deposits. Underwriting and other direct acquisition expenses are associated with gross profit in order to recognize profit over the life of the business. This is accomplished through deferral and amortization of acquisition costs and sales inducements. Expenses not related to policy acquisition are recognized when incurred.

Investment income is not accrued on securities in default and otherwise where the collection is uncertain. In these cases, receipts of interest on such securities are used to reduce the cost basis of the securities.

**Subsequent Events**

The Company has evaluated events through March 18, 2020, which is the date the financial statements were available to be issued.

**3. Investments**

Investments are comprised primarily of fixed-income securities, primarily publicly-traded corporate and government bonds and asset-backed securities. Asset-backed securities include mortgage-backed and other structured securities. The Company generates the majority of its general account deposits from interest-sensitive individual annuity contracts on which it has committed to pay a declared rate of interest. The Company's strategy of investing in fixed-income securities aims to ensure matching of the asset yield with the amounts credited to the interest-sensitive liabilities and to earn a stable return on its investments.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

**Debt Securities**

The following table sets forth the composition of the fair value of debt securities at December 31, 2019, classified by rating categories as assigned by nationally recognized statistical rating organizations (“NRSRO”), the National Association of Insurance Commissioners (“NAIC”), or if not rated by such organizations, the Company’s affiliated investment advisor. At December 31, 2019, the carrying value of investments rated by the Company’s affiliated investment advisor was nil. For purposes of the table, if not otherwise rated higher by a NRSRO, NAIC Class 1 investments are included in the A rating, Class 2 in BBB, Class 3 in BB and Classes 4 through 6 in B and below.

<u>Investment Rating</u>	<u>Percent of Total Debt Securities Carrying Value December 31, 2019</u>
AAA	16.1%
AA	6.1%
A	38.8%
BBB	36.5%
Investment grade	97.5%
BB	1.7%
B and below	0.8%
Below investment grade	2.5%
Total debt securities	100.0%

At December 31, 2019, based on ratings by NRSROs, of the total carrying value of debt securities in an unrealized loss position, 85% were investment grade, 5% were below investment grade and 10% were not rated. Unrealized losses on debt securities that were below investment grade or not rated were approximately 25% of the aggregate gross unrealized losses on available for sale debt securities.

Corporate securities in an unrealized loss position were diversified across industries. As of December 31, 2019, the industries accounting for the larger percentage of unrealized losses included utility (55% of corporate gross unrealized losses) and energy (17%). The largest unrealized loss related to a single corporate obligor was \$111 thousand at December 31, 2019.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

At December 31, 2019 and 2018, the amortized cost, gross unrealized gains and losses, fair value and non-credit other-than-temporary impairment (“OTTI”) of available for sale debt securities were as follows (in thousands):

<b>December 31, 2019</b>	<b>Amortized Cost</b>	<b>Gross Unrealized Gains</b>	<b>Gross Unrealized Losses</b>	<b>Fair Value</b>	<b>Non-credit OTTI <sup>(1)</sup></b>
<b>Debt Securities</b>					
U.S. government securities	\$ 35,744	\$ -	\$ 440	\$ 35,304	\$ -

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

Securities with a carrying value of \$490 thousand and \$501 thousand at December 31, 2019 and 2018, respectively, were on deposit with the state of New York as required by state insurance law.

Residential mortgage-backed securities (“RMBS”) include certain RMBS which are collateralized by residential mortgage loans and are neither explicitly nor implicitly guaranteed by U.S. government agencies (“non-agency RMBS”). The Company’s non-agency RMBS include investments in securities backed by prime, Alt-A, and subprime loans as follows (in thousands):

	<b>Amortized Cost</b>	<b>Gross Unrealized Gains</b>	<b>Gross Unrealized Losses</b>	<b>Fair Value</b>
<b>December 31, 2019</b>				
Prime	\$ 14,222	\$ 469	\$ -	\$ 14,691
Alt-A	2,786	436	-	3,222
Subprime	4,376	598	10	4,964
Total non-agency RMBS	<u>\$ 21,384</u>	<u>\$ 1,503</u>	<u>\$ 10</u>	<u>\$ 22,877</u>
<b>December 31, 2018</b>				
	<b>Amortized Cost</b>	<b>Gross Unrealized Gains</b>	<b>Gross Unrealized Losses</b>	<b>Fair Value</b>
Prime	\$ 8,638	\$ 293	\$ -	\$ 8,931
Alt-A	3,503	655	4	4,154
Subprime	5,636	313	54	5,895
Total non-agency RMBS	<u>\$ 17,777</u>	<u>\$ 1,261</u>	<u>\$ 58</u>	<u>\$ 18,980</u>

The Company defines its exposure to non-agency residential mortgage loans as follows. Prime loan-backed securities are collateralized by mortgage loans made to the highest rated borrowers. Alt-A loan-backed securities are collateralized by mortgage loans made to borrowers who lack credit documentation or necessary requirements to obtain prime borrower rates. Subprime loan-backed securities are collateralized by mortgage loans made to borrowers that have a FICO score of 680 or lower.

**Other-Than-Temporary Impairments on Available For Sale Debt Securities**

The Company periodically reviews its available for sale debt securities on a case-by-case basis to determine if any decline in fair value to below cost or amortized cost is other-than-temporary. Factors considered in determining whether a decline is other-than-temporary include the length of time a security has been in an unrealized loss position, the

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

---

severity of the unrealized loss and the reasons for the decline in value and expectations for the amount and timing of a recovery in fair value.

Securities the Company determines are underperforming or potential problem securities are subject to regular review. To facilitate the review, securities with significant declines in value, or where other objective criteria evidencing credit deterioration have been met, are included on a watch list. Among the criteria for securities to be included on a watch list are: credit deterioration that has led to a significant decline in fair value of the security; a significant covenant related to the security has been breached; or an issuer has filed or indicated a possibility of filing for bankruptcy, has missed or announced it intends to miss a scheduled interest or principal payment, or has experienced a specific material adverse change that may impair its creditworthiness.

In performing these reviews, the Company considers the relevant facts and circumstances relating to each investment and exercises considerable judgment in determining whether a security is other-than-temporarily impaired. Assessment factors include judgments about an obligor's current and projected financial position, an issuer's current and projected ability to service and repay its debt obligations, the existence of, and realizable value of, any collateral backing the obligations and the macro-economic and micro-economic outlooks for specific industries and issuers. This assessment may also involve assumptions regarding underlying collateral such as prepayment rates, default and recovery rates, and third-party servicing capabilities.

Among the specific factors considered are whether the decline in fair value results from a change in the credit quality of the security itself, or from a downward movement in the market as a whole, and the likelihood of recovering the carrying value based on the near-term prospects of the issuer. Unrealized losses that are considered to be primarily the result of market conditions (e.g., minor increases in interest rates, temporary market illiquidity or volatility or industry-related events) and where the Company also believes there exists a reasonable expectation for recovery in the near term are usually determined to be temporary. To the extent that factors contributing to impairment losses recognized affect other investments, such investments are also reviewed for other-than-temporary impairment and losses are recorded when appropriate.

In addition to the review procedures described above, investments in asset-backed securities where market prices are depressed are subject to a review of their future estimated cash flows, including expected and stress case scenarios, to identify potential shortfalls in contractual payments. These estimated cash flows are developed using available performance indicators from the underlying assets including current and projected default or delinquency rates, levels of credit enhancement, current subordination levels, vintage, expected loss severity and other relevant characteristics. These estimates reflect a combination of data derived by third parties and internally developed assumptions. Where possible, this data is benchmarked against third-party sources.

Even in the case of severely depressed market values on asset-backed securities, the Company places significant reliance on the results of its cash flow testing and its lack of an intent to sell these securities until their fair values recover when reaching other-than-temporary impairment conclusions with regard to these securities. Other-than-temporary impairment charges are recorded on asset-backed securities when the Company forecasts a contractual payment shortfall.

The Company recognizes other-than-temporary impairments on debt securities in an unrealized loss position when any of the following circumstances exists:

- The Company does not expect full recovery of the amortized cost based on the discounted cash flows estimated to be collected;
- The Company intends to sell a security; or,
- It is more likely than not that the Company will be required to sell a security prior to recovery.

For mortgage-backed securities, credit impairment is assessed using a cash flow model that estimates the cash flows on the underlying mortgages, using the security-specific collateral characteristics and transaction structure. The model estimates cash flows from the underlying mortgage loans and distributes those cash flows to various tranches of securities, considering the transaction structure and any subordination and credit enhancements existing in that structure. The cash flow model incorporates actual cash flows on the mortgage-backed securities through the current

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

period and then projects the remaining cash flows using a number of assumptions, including prepayment speeds, default rates and loss severity.

Specifically for prime and Alt-A RMBS, the assumed default percentage is dependent on the severity of delinquency status, with foreclosures and real estate owned receiving higher rates, but also includes the currently performing loans. As of December 31, 2019, and 2018, assumed default rates for delinquent loans ranged from 15% to 100%. At December 31, 2019 and 2018, assumed loss severities were applied to generate and analyze cash flows of each security and ranged from 30% to 70% and 25% to 70%, respectively.

These estimates reflect a combination of data derived by third-parties and internally developed assumptions. Where possible, this data is benchmarked against other third-party sources. In addition, these estimates are extrapolated along a default timing curve to estimate the total lifetime pool default rate.

Other-than-temporary impairments are calculated as the difference between amortized cost and fair value. For other-than-temporarily impaired securities where Jackson-NY does not intend to sell the security and it is not more likely than not that Jackson-NY will be required to sell the security prior to recovery, total other-than-temporary impairments are reduced by the non-credit portion of the other-than-temporary impairments, which are recognized in other comprehensive income. The resultant net other-than-temporary impairments recorded in net income reflect only the credit loss on the other-than-temporarily impaired securities. The amortized cost of the other-than-temporarily impaired securities is reduced by the amount of this credit loss.

For securities that were deemed to be other-than-temporarily impaired and for which a non-credit loss was recorded in other comprehensive income, the amount recorded as an unrealized gain (loss) represents the difference between the fair value and the new amortized cost basis of the securities. The unrealized gain (loss) on other-than-temporarily impaired securities is recorded in other comprehensive income.

The following table summarizes net realized gains (losses) on investments (in thousands):

	Years Ended December 31,		
	2019	2018	2017
Available-for-sale debt securities			
Realized gains on sale	\$ 3,483	\$ 1,584	\$ 33,647
Realized losses on sale	(1,077)	(1,543)	(6,623)
Impairments:			
Total other-than-temporary impairments	(45)	(12)	(151)
Portion of other-than-temporary impairments included in other comprehensive income	-	(45)	126
Net other-than-temporary impairments	(45)	(57)	(25)
Other	-	1	34
Net realized gains (losses) on investments	<u>\$ 2,361</u>	<u>\$ (15)</u>	<u>\$ 27,033</u>

The aggregate fair value of securities sold at a loss for the years ended December 31, 2019, 2018, and 2017 was \$23.6 million, \$40.1 million, and \$205.8 million, respectively, which was approximately 96%, 97%, and 97% of book value, respectively.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

The following summarizes the current year activity for credit losses recognized in net income on debt securities where an other-than-temporary impairment was identified and the non-credit portion of the other-than-temporary impairment was included in other comprehensive income (in thousands):

	<b>Years Ended December 31,</b>	
	<b>2019</b>	<b>2018</b>
Cumulative credit loss beginning balance	\$ 3,686	\$ 3,692
Additions:		
New credit losses	45	11
Incremental credit losses	-	47
Reductions:		
Securities sold, paid down or disposed of	(1,395)	(53)
Securities where there is intent to sell	(45)	(11)
Cumulative credit loss ending balance	<u>\$ 2,291</u>	<u>\$ 3,686</u>

There are inherent uncertainties in assessing the fair values assigned to the Company's investments and in determining whether a decline in fair value is other-than-temporary. The Company's reviews of net present value and fair value involve several criteria including economic conditions, credit loss experience, other issuer-specific developments and estimated future cash flows. These assessments are based on the best available information at the time. Factors such as market liquidity, the widening of bid/ask spreads and a change in the cash flow assumptions can contribute to future price volatility. If actual experience differs negatively from the assumptions and other considerations used in the financial statements, unrealized losses currently reported in accumulated other comprehensive income may be recognized in the income statements in future periods.

The Company currently has no intent to sell securities with unrealized losses considered to be temporary until they mature or recover in value and believes that it has the ability to do so. However, if the specific facts and circumstances surrounding an individual security, or the outlook for its industry sector change, the Company may sell the security prior to its maturity or recovery and realize a loss.

**Securities Lending**

The Company has entered into a securities lending agreement with an agent bank whereby blocks of securities are loaned to third parties, primarily major brokerage firms. This agreement is subject to master netting arrangements and collateral arrangements, which creates a right of offset for amounts due to and due from that same counterparty that is enforceable in the event of a default or bankruptcy. The Company recognizes amounts subject to master netting arrangements on a gross basis within the balance sheets.

As of December 31, 2019 and 2018, the estimated fair value of loaned securities was \$0.2 million and \$1.0 million, respectively. The agreements require a minimum of 102 percent of the fair value of the loaned securities to be held as collateral, calculated on a daily basis. To further minimize the credit risks related to this program, the financial condition of counterparties is monitored on a regular basis. At December 31, 2019 and 2018, cash collateral received in the amount of \$0.3 million and \$1.0 million, respectively, was invested by the agent bank and included in cash and cash equivalents of the Company. A securities lending payable for the overnight and continuous loans is included in other liabilities in the amount of cash collateral received.

Securities lending transactions are used to generate income. Income and expenses associated with these transactions are reported in net investment income.

<b>Liabilities</b>				
Annuity reserves <sup>(2)</sup>	\$ 1,812,712	\$ 2,668,158	\$ 1,836,734	\$ 2,431,071
Securities lending payable	255	255	1,036	1,036
Separate account liabilities	13,489,116	13,489,116	11,072,895	11,072,895

<sup>(1)</sup> Represents only the components of reinsurance recoverable that are considered to be financial instruments, which arise from the GMWB and GMIB reinsurance and variable annuity general account reinsurance agreements.

<sup>(2)</sup> Annuity reserves represent only the components of other contract holder funds and reserves for future policy benefits and claims payable that are considered to be financial instruments.

The following is a discussion of the methodologies used to determine fair values of the financial instruments measured on both a recurring and nonrecurring basis reported in the following tables.

**Debt and Equity Securities**

The fair values for debt and equity securities are determined using information available from independent pricing services, broker-dealer quotes, or internally derived estimates. Priority is given to publicly available prices from independent sources, when available. Securities for which the independent pricing service does not provide a quotation are either submitted to independent broker-dealers for prices or priced internally. Typical inputs used by these three pricing methods include, but are not limited to, reported trades, benchmark yields, credit spreads, liquidity premiums, and/or estimated cash flows based on default and prepayment assumptions.

As a result of typical trading volumes and the lack of specific quoted market prices for most debt securities, independent pricing services will normally derive the security prices through recently reported trades for identical or similar securities, making adjustments through the reporting date based upon available market observable information as outlined above. If there are no recently reported trades, the independent pricing services and broker-dealers may use matrix or pricing model processes to develop a security price where future cash flow expectations are developed based upon collateral performance and discounted at relevant market rates. Certain securities are priced using broker-dealer quotes, which may utilize proprietary inputs and models. Additionally, the majority of these quotes are non-binding.

Included in the pricing of asset-backed securities are estimates of the rate of future prepayments of principal over the remaining life of the securities. Such estimates are derived based on the characteristics of the underlying structure and prepayment assumptions believed to be relevant for the underlying collateral. Actual prepayment experience may vary from these estimates.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**

**December 31, 2019 and 2018**

---

Internally derived estimates may be used to develop a fair value for securities for which the Company is unable to obtain either a reliable price from an independent pricing service or a suitable broker-dealer quote. These fair value estimates may incorporate Level 2 and Level 3 inputs and are generally derived using expected future cash flows, discounted at market interest rates available from market sources based on the credit quality and duration of the instrument. For securities that may not be reliably priced using these internally developed pricing models, a fair value may be estimated using indicative market prices. These prices are indicative of an exit price, but the assumptions used to establish the fair value may not be observable or corroborated by market observable information and, therefore, represent Level 3 inputs.

The Company performs a monthly analysis on the prices and credit spreads received from third parties to ensure that the prices represent a reasonable estimate of the fair value. This process involves quantitative and qualitative analysis and is overseen by investment and accounting professionals. Examples of procedures performed include, but are not limited to, initial and ongoing review of third party pricing service methodologies, review of pricing statistics and trends, back testing recent trades and monitoring of trading volumes. In addition, the Company considers whether prices received from independent broker-dealers represent a reasonable estimate of fair value through the use of internal and external cash flow models, which are developed based on spreads and, when available, market indices. As a result of this analysis, if the Company determines there is a more appropriate fair value based upon the available market data, the price received from the third party may be adjusted accordingly.

For those securities that were internally valued at December 31, 2019 and 2018, the pricing model used by the Company utilizes current spread levels of similarly rated securities to determine the market discount rate for the security. Furthermore, appropriate risk premiums for illiquidity and non-performance are incorporated in the discount rate. Cash flows, as estimated by the Company using issuer-specific default statistics and prepayment assumptions, are discounted to determine an estimated fair value.

On an ongoing basis, the Company reviews the independent pricing services' valuation methodologies and related inputs, and evaluates the various types of securities in its investment portfolio to determine an appropriate fair value hierarchy distribution based upon trading activity and the observability of market inputs. Based on the results of this evaluation, each price is classified into Level 1, 2, or 3. Most prices provided by independent pricing services, including broker quotes, are classified into Level 2 due to their use of market observable inputs.

#### **Policy Loans**

Policy loans are funds provided to policyholders in return for a claim on the policies values and function like demand deposits which are redeemable upon repayment, death or surrender, and there is only one market price at which the transaction could be settled – the then current carrying value. The funds provided are limited to the cash surrender value of the underlying policy. The nature of policy loans is to have a negligible default risk as the loans are fully collateralized by the value of the policy. Policy loans do not have a stated maturity and the balances and accrued interest are repaid either by the policyholder or with proceeds from the policy. Due to the collateralized nature of policy loans and unpredictable timing of payments, the Company believes the carrying value of policy loans approximates fair value.

#### **Cash and Cash Equivalents**

Cash and cash equivalents primarily include money market instruments and bank deposits. Money market instruments are valued using unadjusted quoted prices in active markets and are classified as Level 1.

#### **Reinsurance Recoverable**

Reinsurance recoverable includes ceded amounts related to both variable annuity guaranteed benefit reserves and variable annuity general account fund balances. Certain ceded guaranteed benefit reserves are carried at fair value, as discussed below. Fair values of general account fund balances are determined using projected future cash flows discounted at current market rates.

#### **Separate Account Assets and Liabilities**

Separate account assets are comprised of investments in mutual funds that transact regularly, but do not trade in active markets as they are not publicly available, are categorized as Level 2 assets. The value of separate account liabilities are set equal to the values of separate account assets.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**

**December 31, 2019 and 2018**

---

**Other Contract Holder Funds**

Fair values for immediate annuities without mortality features are derived by discounting the future estimated cash flows using current market interest rates for similar maturities. Fair values for deferred annuities are determined using projected future cash flows discounted at current market interest rates.

**Securities Lending Payable**

The Company's securities lending payable, which is included in other liabilities, is set equal to the cash collateral received. Due to the short-term nature of the loans, carrying value is a reasonable estimate of fair value and is classified as Level 2.

**Certain Guaranteed Benefits**

Variable annuity contracts issued by the Company offer various guaranteed minimum death, withdrawal, and income benefits. Certain benefits, primarily non-life contingent GMWBs and the reinsurance recoverable on the Company's GMIBs, are recorded at fair value. Guaranteed benefits that are not subject to fair value accounting are accounted for as insurance benefits.

Non-life contingent components of GMWBs are recorded at fair value with changes in fair value recorded in death, other policy benefits and change in policy reserves. The fair value of the reserve is based on the expectations of future benefit payments and certain future fees associated with the benefits. At the inception of the contract, the Company attributes to the embedded derivative a portion of rider fees collected from the contract holder, which is then held static in future valuations. Those fees, generally referred to as the attributed fees, are set such that the present value of the attributed fees is equal to the present value of future claims expected to be paid under the guaranteed benefit at the inception of the contract. In subsequent valuations, both the present value of future benefits and the present value of attributed fees are revalued based on current market conditions and policyholder behavior assumptions. The difference between each of the two components represents the fair value of the embedded derivative. The ceded reserves for these products are calculated based on the assuming company's share of the direct reserve.

Jackson-NY's GMIB book is reinsured through an unrelated party, and due to the net settlement provisions of the reinsurance agreement, this contract meets the definition of a derivative. Accordingly, the GMIB reinsurance agreement is recorded at fair value, with changes in fair value recorded in death, other policy benefits and change in policy reserves. Due to the inability to economically reinsure or hedge new issues of the GMIB, the Company discontinued offering the benefit in 2009.

Fair values for direct and ceded GMWB embedded derivatives, as well as GMIB reinsurance recoverables, are calculated using internally developed models because active, observable markets do not exist for those guaranteed benefits.

The fair value calculation is based on the present value of future cash flows comprised of future expected benefit payments, less future attributed rider fees, over the lives of the contracts. Estimating these cash flows requires numerous estimates and subjective judgments related to capital market inputs, as well as actuarially determined assumptions related to expectations concerning policyholder behavior. Capital market inputs include expected market rates of return, market volatility, correlations of market index returns to funds, fund performance and discount rates. The more significant actuarial assumptions include benefit utilization by policyholders, persistency, mortality, and withdrawal rates. Best estimate assumptions plus risk margins are used as applicable.

At each valuation date, the Company assumes expected returns based on the greater of LIBOR swap rates and constant maturity treasury rates as of that date to determine the value of expected future cash flows produced in a stochastic process. Volatility assumptions are based on a weighting of available market data for implied market volatility for durations up to 10 years, grading to a historical volatility level by year 15, where such long-term historical volatility levels contain an explicit risk margin. Additionally, non-performance risk is incorporated into the calculation through the use of discount rates based on a AA corporate credit curve as an approximation of Jackson-NY's own credit risk. Risk margins are also incorporated into the model assumptions, particularly for policyholder behavior. Estimates of future policyholder behavior are subjective and are based primarily on the Company's experience and that of its Parent.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**  
**December 31, 2019 and 2018**

As markets change, mature and evolve and actual policyholder behavior emerges, management continually evaluates the appropriateness of its assumptions for this component of the fair value model.

The use of the models and assumptions described above requires a significant amount of judgment. Management believes the aggregation of each of these components results in an amount that the Company would be required to transfer for a liability, or receive for an asset, to or from a willing buyer or seller, if one existed, for those market participants to assume the risks associated with the guaranteed benefits and the related reinsurance. However, the ultimate settlement amount of the asset or liability, which is currently unknown, could likely be significantly different than the fair value.

**Assets and Liabilities Measured at Fair Value on a Recurring Basis**

The following table summarizes the Company's assets and liabilities that are carried at fair value by hierarchy levels (in thousands):

	December 31, 2019			
	Total	Level 1	Level 2	Level 3
<b>Assets</b>

Embedded derivative liability	\$ 189,585	Discounted cash flow	See below	See below	See below

<sup>(1)</sup> Represents only the components of reinsurance recoverable that are considered to be financial instruments, which arise from the GMWB and GMIB reinsurance agreements.

**Sensitivity to Changes in Unobservable Inputs**

The following is a general description of sensitivities of significant unobservable inputs and their impact on the fair value measurement, for the assets and liabilities reflected in the table above.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

---

For these assets, their unobservable inputs and ranges of possible inputs do not materially affect their fair valuations and have been excluded from the quantitative information in the table above.

The GMIB reinsurance recoverable fair value calculation is based on the present value of future cash flows comprised of future expected reinsurance benefit receipts, less future attributed premium payments to reinsurers, over the lives of the contracts. Estimating these cash flows requires actuarially determined assumptions related to expectations concerning policyholder behavior and long-term market volatility. The more significant policyholder behavior actuarial assumptions include benefit utilization, fund allocation, persistency, and mortality. In general, an increase (decrease) in assumed benefit utilization would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in allocation to equity funds would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in assumed persistency would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in assumed mortality would decrease (increase) the fair value of the reinsurance recoverable; and an increase (decrease) in long-term market volatility would increase (decrease) the fair value of the reinsurance recoverable.

Embedded derivative liabilities classified in Level 3 represent the fair value of GMWB liabilities. These fair value calculations are based on the present value of future cash flows comprised of future expected benefit payments, less future attributed rider fees, over the lives of the contracts. Estimating these cash flows requires actuarially determined assumptions related to expectations concerning policyholder behavior and long-term market volatility. The more significant policyholder behavior actuarial assumptions include benefit utilization, fund allocation, persistency, and mortality. In general, an increase (decrease) in assumed benefit utilization would increase (decrease) the fair value of the liabilities; an increase (decrease) in allocation to equity funds would increase (decrease) the fair value of the liabilities; an increase (decrease) in assumed persistency would increase (decrease) the fair value of the liabilities; an increase (decrease) in assumed mortality would decrease (increase) the fair value of the liabilities; and an increase (decrease) in long-term market volatility would increase (decrease) the fair value of the liabilities.

GMWB reinsurance recoverable fair value calculations are based on the assuming company's share of the direct reserve, which is described above. The more significant actuarial assumptions include benefit utilization, fund allocation, persistency, mortality, and long-term market volatility. In general, an increase (decrease) in assumed benefit utilization would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in allocation to equity funds would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in assumed persistency would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in assumed mortality would decrease (increase) the fair value of the reinsurance recoverable; and an increase (decrease) in long-term market volatility would increase (decrease) the fair value of the reinsurance recoverable.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

The tables below provide rollforwards for 2019 and 2018 of the financial instruments for which significant unobservable inputs (Level 3) are used in the fair value measurement. Gains and losses in the table below include changes in fair value due partly to observable and unobservable factors. Additionally, the Company's policy for determining and disclosing transfers between levels is to recognize transfers using the beginning of period balances.

(in thousands)	<u>Total Realized/Unrealized Gains (Losses) Included in</u>					
	Fair Value as of January 1, 2019	Net Income	Other Comprehensive Income	Purchases, Sales, Issuances and Settlements	Transfers in and/or out of Level 3	Fair Value as of December 31, 2019
<b>Assets</b>						
Reinsurance recoverable, net <sup>(1)</sup>	\$ 183,771	\$ 7,626	\$ -	\$ -	\$ -	\$ 191,397
<b>Liabilities</b>						
Embedded derivative liability	\$ (189,585)	\$ (7,483)	\$ -	\$ -	\$ -	\$ (197,068)

(in thousands)	<u>Total Realized/Unrealized Gains (Losses) Included in</u>					
	Fair Value as of January 1, 2018	Net Income	Other Comprehensive Income	Purchases, Sales, Issuances and Settlements	Transfers in and/or out of Level 3	Fair Value as of December 31, 2018
<b>Assets</b>						
Reinsurance recoverable, net <sup>(1)</sup>	\$ 110,326	\$ 73,445	\$ -	\$ -	\$ -	\$ 183,771
<b>Liabilities</b>						
Embedded derivative liability	\$ (109,052)	\$ (80,533)	\$ -	\$ -	\$ -	\$ (189,585)

<sup>(1)</sup> Represents only the components of reinsurance recoverable that are considered to be financial instruments, which arise from the GMWB and GMIB reinsurance agreements.

There were no transfers between Level 2 and Level 3 in 2019 or 2018. In addition, there were no transfers between Level 1 and 2 of the fair value hierarchy in 2019 or 2018.

The portion of gains (losses) included in net income or other comprehensive income attributable to the change in unrealized gains and losses on Level 3 financial instruments still held at December 31, 2019 and 2018, was as follows (in thousands):

	<u>2019</u>	<u>2018</u>
<b>Assets</b>		
Reinsurance recoverable, net <sup>(1)</sup>	\$ 7,626	\$ 73,445
<b>Liabilities</b>		
Embedded derivative liability	\$ (7,483)	\$ (80,533)

<sup>(1)</sup> Represents only the components of reinsurance recoverable that are considered to be financial instruments, which arise from the GMWB and GMIB reinsurance agreements.

Securities lending payable	Level 2	255	255	1,036	1,036
Separate account liabilities <sup>(3)</sup>	Level 2	13,489,116	13,489,116	11,072,895	11,072,895

<sup>(1)</sup> Represents only the components of reinsurance recoverable that are considered to be financial instruments, which arise from the variable annuity general account reinsurance agreement.

<sup>(2)</sup> Annuity reserves represent only the components of other contract holder funds that are considered to be financial instruments.

<sup>(3)</sup> The values of separate account liabilities are set equal to the values of separate account assets.

**5. Deferred Acquisition Costs and Deferred Sales Inducements**

The balances of and changes in deferred acquisition costs, as of and for the years ended December 31, were as follows (in thousands):

	2019	2018	2017
Balance, beginning of year	\$ 71,338	\$ 54,835	\$ 52,578
Deferrals of acquisition costs	5,964	6,433	6,696
Amortization related to:			
Operations	(6,315)	(4,272)	(7,276)
Net realized (gains) losses	(135)	1	(3,683)
Total amortization	(6,450)	(4,271)	(10,959)
Unrealized investment (gains) losses	(22,530)	14,341	6,520
Balance, end of year	\$ 48,322	\$ 71,338	\$ 54,835

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

The balances of and changes in deferred sales inducements, as of and for the years ended December 31, were as follows (in thousands):

	<u>2019</u>	<u>2018</u>	<u>2017</u>
Balance, beginning of year	\$ 2,646	\$ 2,258	\$ 2,524
Deferrals of sales inducements	37	50	96
Amortization related to:			
Operations	(265)	(235)	(592)
Net realized losses	13	-	9
Total amortization	<u>(252)</u>	<u>(235)</u>	<u>(583)</u>
Unrealized investment (gains) losses	(862)	573	221
Balance, end of year	<u>\$ 1,569</u>	<u>\$ 2,646</u>	<u>\$ 2,258</u>

**6. Reinsurance**

The Company cedes reinsurance to unaffiliated insurance companies in order to limit losses from large exposures; however, if the reinsurer is unable to meet its obligations, the originating issuer of the coverage retains the liability. The Company reinsures certain of its risks to other reinsurers under a yearly renewable term or coinsurance basis. The Company regularly monitors the financial strength rating of reinsurers.

As discussed in Note 2, Jackson-NY also cedes 90% of the risk associated with variable annuities to its Parent on a coinsurance/modified coinsurance basis.

Gross fees in 2019 and 2018 totaled \$313.7 million and \$297.7 million, with \$281.5 million and \$267.6 million ceded under the coinsurance agreement, respectively.

The effect of reinsurance on premiums was as follows (in thousands):

	<b>Years Ended December 31,</b>		
	<u>2019</u>	<u>2018</u>	<u>2017</u>
Direct premiums	\$ 396	\$ 316	\$ 334
Less reinsurance ceded:			
Life	(358)	(243)	(246)
Annuity	(69)	(73)	(78)
Net premiums	<u>\$ (31)</u>	<u>\$ -</u>	<u>\$ 10</u>

The effect of reinsurance on benefits was as follows (in thousands):

	<b>Years Ended December 31,</b>		
	<u>2019</u>	<u>2018</u>	<u>2017</u>
Direct benefits:			
Life	\$ 5,111	(4,564)	4,563
Annuity Guaranteed benefits	255	216	430
Less reinsurance ceded:			
Life	(3,600)	4,345	(7,376)
Deferral of contract enhancements	-	(6)	(16)
Change in reserves, net of reinsurance	312	10,614	838
Total benefits	<u>\$ 2,078</u>	<u>\$ 10,605</u>	<u>\$ (1,561)</u>

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

Components of the reinsurance recoverable were as follows (in thousands):

	December 31,	
	2019	2018
<b>Reinsurance recoverable:</b>		
Ceded reserves	\$ 1,328,031	\$ 1,323,026
Ceded claims liability	35,042	35,297
Ceded claims paid	28,272	27,558
Ceded benefit payments/transfers	205,792	218,935
Total	<u>\$ 1,597,137</u>	<u>\$ 1,604,816</u>

Reinsurance recoverable from the Parent totaled \$1,594.3 million and \$1,601.9 million at December 31, 2019 and 2018, respectively.

The following table sets forth the Company's net life insurance in-force (in thousands):

	December 31,	
	2019	2018
Direct life insurance in-force	\$ 172,543	\$ 204,282
Amounts ceded to other companies	(109,470)	(155,243)
Net life insurance in-force	<u>\$ 63,073</u>	<u>\$ 49,039</u>

**7. Reserves for Future Policy Benefits and Claims Payable and Other Contract Holder Funds**

The following table sets forth the Company's reserves for future policy benefits and claims payable balances (in thousands):

	December 31,	
	2019	2018
Traditional life	\$ 1,810	\$ 1,984
Guaranteed benefits	263,771	260,049
Claims payable and Other	48,886	50,449
Total	<u>\$ 314,467</u>	<u>\$ 312,482</u>

For traditional life insurance contracts, which include term and whole life, reserves are determined using the net level premium method and assumptions as of the issue date or acquisition date as to mortality, interest rates, persistency and expenses, plus provisions for adverse deviation. These assumptions are not unlocked unless the reserve is determined to be deficient.

The Company's liability for future policy benefits also includes liabilities for guaranteed benefits related to certain nontraditional long-duration life and annuity contracts, which are further discussed in Note 8.

The following table sets forth the Company's liabilities for other contract holder fund balances (in thousands):

	December 31,	
	2019	2018
Interest-sensitive life	\$ 4,504	\$ 5,792
Variable annuity fixed option	1,208,714	1,206,751
Fixed annuity	452,187	483,038
Total	<u>\$ 1,665,405</u>	<u>\$ 1,695,581</u>

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

For interest-sensitive life contracts, liabilities approximate the policyholder's account value. For fixed annuities, the liability is the policyholder's account value. At December 31, 2019, the Company had interest sensitive life business with minimum guaranteed interest rates ranging from 3.0% to 4.0%, with a 3.98% average guaranteed rate and fixed interest rate annuities with minimum guaranteed rates ranging from 1.0% to 3.0% and a 2.28% average guaranteed rate.

At December 31, 2019 and 2018, approximately 91% and 95%, respectively, of the Company's interest sensitive life business account values correspond to crediting rates that are at the minimum guaranteed interest rates.

At December 31, 2019 and 2018, approximately 92% and 90%, respectively, of the Company's fixed interest rate annuity account values correspond to crediting rates that are at the minimum guaranteed interest rates. The following tables show the distribution of the fixed interest rate annuities' account values within the presented ranges of minimum guaranteed interest rates (in millions):

<u>Minimum Guaranteed Interest Rate</u>	<u>December 31, 2019</u>		
	<u>Account Value</u>		
	<u>Fixed</u>	<u>Variable</u>	<u>Total</u>
1.0%	\$ 39.9	\$ -	\$ 39.9
>1.0% - 2.0%	49.2	846.6	895.8
>2.0% - 3.0%	322.5	333.7	656.2
Total	\$ 411.6	\$ 1,180.3	\$ 1,591.9

<u>Minimum Guaranteed Interest Rate</u>	<u>December 31, 2018</u>		
	<u>Account Value</u>		
	<u>Fixed</u>	<u>Variable</u>	<u>Total</u>
1.0%	\$ 42.7	\$ 608.7	\$ 651.4
>1.0% - 2.0%	54.7	236.8	291.5
>2.0% - 3.0%	352.9	336.5	689.4
Total	\$ 450.3	\$ 1,182.0	\$ 1,632.3

**8. Certain Nontraditional Long-Duration Contracts and Variable Annuity Guarantees**

The Company issues variable contracts through its separate accounts for which investment income and investment gains and losses accrue directly to, and investment risk is borne by, the contract holder (traditional variable annuities). The Company also issues variable annuity and life contracts through separate accounts where the Company contractually guarantees to the contract holder (variable contracts with guarantees) either a) return of no less than total deposits made to the account adjusted for any partial withdrawals, b) total deposits made to the account adjusted for any partial withdrawals plus a minimum return, or c) the highest account value on a specified anniversary date adjusted for any withdrawals following the contract anniversary. These guarantees include benefits that are payable in the event of death (GMDB), at annuitization (GMIB) or upon the depletion of funds (GMWB).

The assets supporting the variable portion of both traditional variable annuities and variable contracts with guarantees are carried at fair value and reported as summary total separate account assets with an equivalent summary total reported for separate account liabilities. Liabilities for guaranteed benefits are general account obligations and are reported in reserves for future policy benefits and claims payable. Amounts assessed against the contract holders for mortality, administrative, and other services are reported in revenue as fee income. Changes in liabilities for minimum guarantees are reported within death, other policy benefits and change in policy reserves in the income statement. Separate account net investment income, net investment gains and losses, and the related liability changes are offset within the same line item in the income statements.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

At December 31, 2019 and 2018, the Company provided variable annuity contracts with guarantees, for which the net amount at risk (“NAR”) is defined as the amount of guaranteed benefit in excess of current account value, as follows (dollars in millions):

<b>December 31, 2019</b>	<u>Minimum Return</u>	<u>Account Value</u>	<u>Net Amount at Risk</u>	<u>Weighted Average Attained Age</u>	<u>Average Period until Expected Annuitization</u>
Return of net deposits plus a minimum return					
GMDB	0%	\$ 9,491.7	\$ 79.1	65.8 years	
GMWB - Premium only	0%	216.5	1.2		
GMWB	0-5%*	19.0	0.3		
Highest specified anniversary account value minus withdrawals post-anniversary					
GMDB		2,076.4	17.9	66.9 years	
GMWB - Highest anniversary only		216.8	2.3		
GMWB		33.3	2.5		
Combination net deposits plus minimum return, highest specified anniversary account value minus withdrawals post-anniversary					
GMIB	0-6%	79.9	27.1		0.5 years
GMWB	0-8%*	9,670.3	459.0		
<b>December 31, 2018</b>	<u>Minimum Return</u>	<u>Account Value</u>	<u>Net Amount at Risk</u>	<u>Weighted Average Attained Age</u>	<u>Average Period until Expected Annuitization</u>
Return of net deposits plus a minimum return					
GMDB	0%	\$ 7,796.0	\$ 272.9	65.5 years	
GMWB - Premium only	0%	187.0	5.6		
GMWB	0-5%*	17.6	1.2		
Highest specified anniversary account value minus withdrawals post-anniversary					
GMDB		1,742.0	192.7	66.3 years	
GMWB - Highest anniversary only		184.3	23.7		
GMWB		33.4	4.8		
Combination net deposits plus minimum return, highest specified anniversary account value minus withdrawals post-anniversary					
GMIB	0-6%	74.4	35.9		0.1 years
GMWB	0-8%*	7,951.6	1,433.4		

\* Ranges shown based on simple interest. The upper limits of 5% or 8% simple interest are approximately equal to 4.1% and 6%, respectively, on a compound interest basis over a typical 10-year bonus period. The combination GMWB category also includes benefits with a defined increase in the withdrawal percentage under pre-defined non-market conditions.

Amounts shown as GMWB above include a ‘not-for-life’ component up to the point at which the guaranteed withdrawal benefit is exhausted, after which benefits paid are considered to be ‘for-life’ benefits. The liability related to this ‘not-for-life’ portion is valued as an embedded derivative, while the ‘for-life’ benefits are valued as an insurance liability (see below). For this table, the net amount at risk of the ‘not-for-life’ component is the undiscounted excess of the guaranteed withdrawal benefit over the account value, and that of the ‘for-life’ component is the estimated value of additional life contingent benefits paid after the guaranteed withdrawal benefit is exhausted.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

Account balances of contracts with guarantees were invested in variable separate accounts as follows (in millions):

Fund type:	<u>December 31,</u>	
	<u>2019</u>	<u>2018</u>
Equity	\$ 8,405.3	\$ 6,751.8
Bond	1,274.2	1,170.9
Balanced	1,882.0	1,588.0
Money market	47.1	48.8
Total	<u>\$ 11,608.6</u>	<u>\$ 9,559.5</u>

GMDB liabilities reflected in the general account were as follows (in millions):

	<u>2019</u>	<u>2018</u>
Balance at January 1	\$ 56.2	\$ 35.6
Incurred guaranteed benefits	(0.9)	22.5
Paid guaranteed benefits	(1.9)	(1.9)
Balance at December 31	<u>\$ 53.4</u>	<u>\$ 56.2</u>

The GMDB liability is determined by estimating the expected value of death benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. The Company regularly evaluates estimates used and adjusts the liability balance through the income statement within death, other policy benefits and change in policy reserves, if actual experience or other evidence suggests that earlier assumptions should be revised.

The following assumptions and methodology were used to determine the GMDB liability at both December 31, 2019 and 2018 (except where noted):

- 1) Use of a series of stochastic investment performance scenarios, based on historical average market volatility.
- 2) Mean investment performance assumption of 7.4% after investment management fees, but before investment advisory fees and mortality and expense charges.
- 3) Mortality equal to 24% to 100% of the Annuity 2000 table (2018: 25% to 100%).
- 4) Lapse rates varying by contract type, duration and degree the benefit is in-the-money and ranging from 0.3% to 27.9% (before application of dynamic adjustments.)
- 5) Discount rates: 7.4% on 2013 and later issues, 8.4% on 2012 and prior issues

Most GMWB reserves are considered to be derivatives under current accounting guidance and are recognized at fair value, as previously defined, with the change in fair value reported in death, other policy benefits and change in policy reserves. The fair value of these liabilities is determined using stochastic modeling and inputs as further described in Note 4. The fair valued GMWB had a reserve liability of \$197.1 million and \$189.6 million at December 31, 2019 and 2018, respectively, and was reported in reserves for future policy benefits and claims payable.

Jackson-NY has also issued certain GMWB products that guarantee payments over a lifetime. Reserves for the portion of these benefits after the point where the guaranteed withdrawal balance is exhausted are calculated using assumptions and methodology similar to the GMDB liability. At December 31, 2019 and 2018, these GMWB reserves totaled \$9.1 million and \$9.5 million, respectively, and were reported in reserves for future policy benefits and claims payable.

The direct GMIB liability is determined at each period end by estimating the expected value of the annuitization benefits in excess of the projected account balance at the date of annuitization and recognizing the excess ratably over the accumulation period based on total expected assessments. The assumptions used for calculating the direct GMIB liability are consistent with those used for calculating the GMDB liability. At December 31, 2019 and 2018, GMIB reserves totaled \$3.5 million and \$4.2 million, respectively.

**(a wholly owned subsidiary of Jackson National Life Insurance Company)**

**Notes to Financial Statements**  
**December 31, 2019 and 2018**

**9. Federal Income Taxes**

On December 22, 2017, the Tax Cuts and Jobs Act (the “Tax Act”) was signed into law. The Tax Act changed many aspects of the U.S. corporate income tax system, including a reduction of the U.S. federal corporate income tax rate from 35% to 21%, effective January 1, 2018. In accordance with current U.S. GAAP, the effects of changes in tax rates and laws on deferred tax balances are to be recognized in the period in which legislation is enacted. Therefore, the Company remeasured its deferred tax assets and liabilities based on the rates at which they are expected to reverse in the future, which is now 21%. As a result of this reduction, the Company recognized additional tax expense of \$0.5 million and \$29.0 million in 2018 and 2017, respectively, due to the rescaling of deferred tax assets and liabilities. In 2017, the Company also recognized a tax benefit of \$1.5 million due to the impact of the Tax Act on deferred taxes related to unrealized holding gains and losses. In accordance with ASU No. 2018-02, “Reclassification of Certain Tax Effects from Accumulated Other Comprehensive Income,” this stranded tax benefit was reclassified from AOCI to retained earnings.

The components of the provision for federal income taxes were as follows (in thousands):

	<b>Years Ended December 31,</b>		
	<b>2019</b>	<b>2018</b>	<b>2017</b>
Current tax expense (benefit)	\$ 1,148	\$ 1,271	\$ (7,909)
Deferred tax (benefit) expense	(1,382)	2,999	44,928
Income tax (benefit) expense	<u>\$ (234)</u>	<u>\$ 4,270</u>	<u>\$ 37,019</u>

The federal income tax provisions differ from the amounts determined by multiplying pre-tax income by the statutory federal income tax rate of 21% for 2019 and 2018 and 35% for 2017 as follows (in thousands):

	<b>Years Ended December 31,</b>		
	<b>2019</b>	<b>2018</b>	<b>2017</b>
Income taxes at statutory rate	\$ 14,098	\$ 11,072	\$ 29,606
Dividends received deduction	(11,789)	(8,578)	(22,318)
U.S. federal tax reform impact	-	524	28,990
Provision for uncertain tax benefit	-	3,288	1,996
Other	(2,543)	(2,036)	(1,255)
Income tax (benefit) expense	<u>\$ (234)</u>	<u>\$ 4,270</u>	<u>\$ 37,019</u>
Effective tax rate	-0.3%	8.1%	43.8%

Federal income taxes received from Jackson in 2019, 2018, and 2017 were \$3.9 million, \$4.6 million and \$5.0 million, respectively.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

The tax effects of significant temporary differences that gave rise to deferred tax assets and liabilities were as follows (in thousands):

	<b>December 31,</b>	
	<b>2019</b>	<b>2018</b>
<b>Gross deferred tax asset</b>		
Difference between financial reporting and the tax basis of:		
Policy reserves and other insurance items	\$ 11,024	\$ 8,823
Deferred gain on reinsurance	35,711	40,812
Net unrealized losses on available for sale securities	-	2,633
Other	5,213	2,654
Total gross deferred tax asset	<u>51,948</u>	<u>54,922</u>
<b>Gross deferred tax liability</b>		
Difference between financial reporting and the tax basis of:		
Deferred acquisition costs and sales inducements	(4,919)	(5,308)
Net unrealized gains on available for sale securities	(6,852)	-
Other investment items	(2,878)	(4,259)
Other	(46)	-
Total gross deferred tax liability	<u>(14,695)</u>	<u>(9,567)</u>
<b>Net deferred tax asset</b>	<u>\$ 37,253</u>	<u>\$ 45,355</u>

The Company is required to evaluate the recoverability of its deferred tax assets and establish a valuation allowance, if necessary, to reduce its deferred tax asset to an amount that is more likely than not to be realizable. Considerable judgment and the use of estimates are required when determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. When evaluating the need for a valuation allowance, the Company considers many factors, including: the nature and character of the deferred tax assets and liabilities; taxable income in prior carryback years; future reversals of temporary differences; the length of time carryovers can be utilized; and any tax planning strategies the Company would employ to avoid a tax benefit from expiring unused. Although realization is not assured, management believes as of December 31, 2019, it is more likely than not that the deferred tax assets, will be realized. At December 31, 2019 and 2018, the Company did not have a valuation allowance.

The Company has considered both permanent and temporary positions in determining the unrecognized tax benefit rollforward. At of December 31, 2019 and 2018, the Company held reserves related to exclusion of short-term capital gains from the separate account dividends received deduction ("DRD") calculation and a change in the calculation of its tax basis reserves. The following table summarizes the changes in the Company's unrecognized tax benefits (in thousands):

	<b>December 31,</b>	
	<b>2019</b>	<b>2018</b>
Unrecognized tax benefit, beginning of year	\$ 5,284	\$ 1,996
Additions for tax positions identified	-	3,288
Unrecognized tax benefit, end of year	<u>\$ 5,284</u>	<u>\$ 5,284</u>

The Company has not recorded any amounts for penalties related to unrecognized tax benefits during 2019, 2018, or 2017.

Based on information available as of December 31, 2019, the Company believes that, in the next 12 months, there are no positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly increase or decrease.

The Company is generally no longer subject to U.S. federal, state, and local income tax examinations by tax authorities for years prior to 2012.

## **10. Statutory Accounting Capital and Surplus**

The Company is required to prepare statutory financial statements in accordance with statutory accounting practices prescribed or permitted by the insurance department of the state of domicile. Statutory accounting practices primarily differ from GAAP by charging policy acquisition costs to expense as incurred and establishing future policy benefit liabilities using different actuarial assumptions, as well as valuing investments and certain assets and accounting for deferred income taxes on a different basis.

The declaration of dividends that can be paid by the Company is regulated by New York Insurance Law. The Company must file a notice of its intention to declare a dividend and the amount thereof with the Superintendent at least thirty days in advance of any proposed dividend declaration. Dividends are only payable out of earned surplus. The maximum amount of dividends that can be paid in 2019 without prior approval is approximately \$61.1 million.

Statutory capital and surplus of the Company, as reported in its Annual Statement, was \$612.7 million and \$583.2 million at December 31, 2019 and 2018, respectively. Statutory net income of the Company, as reported in its Annual Statement, was \$27.1 million, \$31.5 million, and \$69.8 million in 2019, 2018, and 2017, respectively.

The state of New York has prescribed a Continuous CARVM reserve basis for New York domiciled companies. This reserve basis differs from the Curtate CARVM reserve basis required by The National Association of Insurance Commissioners' Accounting Practices and Procedures Manual ("NAIC SAP"). If the Company's reserves were valued in accordance with NAIC SAP, statutory capital and surplus would be increased by \$7.7 million and \$11.1 million at December 31, 2019 and 2018, respectively, and statutory net income would be (decreased) increased by \$(1.6) million, \$6.6 million, and \$(0.2) million, in 2019, 2018 and 2017, respectively.

Valuation Manual-22: Maximum Valuation Interest Rates for Income Annuities ("VM-22") was effective for NAIC SAP for 2018. New York state law does not reference the Valuation Manual for purposes of defining minimum reserve standards. Thus, reserves for payout business issued in calendar year 2018 are not valued according to VM-22, but rather, are valued per New York regulations. If reserves were established according to NAIC SAP, statutory capital and surplus would have decreased by \$0.9 million and increased by \$0.5 million as of December 31, 2019 and 2018, respectively. Additionally, net income would have decreased by \$1.4 million and increased by \$0.5 million, in 2019 and 2018, respectively.

The Company's asset adequacy testing uses the cash flow testing methodology, which under New York's prescribed assumptions develops negative surplus in certain years, resulting in New York Department of Financial Services ("NYDFS") requiring the Company to establish additional reserves of \$39.0 million and \$30.0 million at December 31, 2019 and 2018, respectively. If reserves were established according to NAIC SAP, statutory capital and surplus would have increased by \$30.8 and \$23.7 million at December 31, 2019 and 2018, respectively.

The NAIC has developed certain risk-based capital ("RBC") requirements for life insurance companies. Under those requirements, compliance is determined by a ratio of a company's total adjusted capital ("TAC"), calculated in a manner prescribed by the NAIC to its authorized control level RBC ("ACL RBC"), calculated in a manner prescribed by the NAIC. Companies below specific trigger points or ratios are classified within certain levels, each of which requires specified corrective action. The minimum level of TAC before corrective action commences is twice ACL RBC ("Company action level RBC"). At December 31, 2019, the Company's TAC remained well in excess of the Company action level RBC.

## **11. Other Related Party Transactions**

The Company's investment portfolio is managed by PPM America, Inc. ("PPM"), a registered investment advisor and ultimately a wholly owned subsidiary of Prudential. The Company paid \$1.4 million, \$1.0 million, and \$1.0 million to PPM for investment advisory services during 2019, 2018, and 2017.

The Company has an administrative services agreement with Jackson, under which Jackson provides certain administrative services. Administrative fees were \$27.9 million, \$31.6 million, and \$19.8 million in 2019, 2018, and 2017, respectively.

**Jackson National Life Insurance Company of New York**  
**(a wholly owned subsidiary of Jackson National Life Insurance Company)**  
**Notes to Financial Statements**  
**December 31, 2019 and 2018**

The Company has an administrative services agreement with Jackson National Life Distributors, LLC (“JNLD”), a subsidiary of Jackson, under which JNLD provides certain marketing services. Administrative fees were \$2.3 million, \$2.6 million, and \$3.0 million in 2019, 2018, and 2017, respectively.

As a result of the amendment to the reinsurance agreement with Jackson, as discussed in Note 2, the net payment of \$905.9 million was reported as a payable to parent at December 31, 2016. The payable was settled on February 14, 2017, through a transfer of securities and cash.

In 2017, the Company recorded a return of capital of \$68.8 million for U.S. GAAP reporting purposes related to the forgiveness of an intercompany tax recoverable from its parent, Jackson. This transaction had no impact on the Company’s statutory financial statements.

**12. Benefit Plans**

The Company participates in a defined contribution retirement plan covering substantially all employees, sponsored by its Parent. To be eligible to participate in the Company’s contribution, an employee must have attained the age of 21, completed at least 1,000 hours of service in a 12-month period and passed their 12-month employment anniversary. In addition, the employees must be employed on the applicable January 1 or July 1 entry date. The Company’s annual contributions are based on a percentage of eligible compensation paid to participating employees during the year. In addition, the Company matches a participant’s elective contribution, up to 6 percent of eligible compensation, to the plan during the year. The Company’s expenses related to this plan were \$0.3 million, \$0.3 million, and \$0.2 million in 2019, 2018, and 2017, respectively.

The Company maintains non-qualified voluntary deferred compensation plans for certain employees, sponsored by its Parent. Additionally, the Company sponsors a non-qualified voluntary deferred compensation plan for certain agents, with the assets retained by Jackson under an administrative services agreement. At December 31, 2019 and 2018, Jackson’s liability for the Company’s portion of such plans totaled \$6.4 million and \$5.5 million, respectively. There were no expenses related to these plans in 2019, 2018 or 2017.

**13. Reclassifications Out of Accumulated Other Comprehensive Income**

The following table represents changes in the balance of AOCI, net of income tax, related to unrealized investment gains (losses) (in thousands):

	<b>December 31,</b>		
	<b>2019</b>	<b>2018</b>	<b>2017</b>
Balance, beginning of year	\$ (2,336)	\$ 17,614	\$ 20,167
OCI before reclassifications	34,611	(20,200)	5,205
Amounts reclassified from AOCI	1,071	(1,240)	(7,758)
Cumulative effects of changes in accounting principles	-	1,490	-
Balance, end of year	<u>\$ 33,346</u>	<u>\$ (2,336)</u>	<u>\$ 17,614</u>

**Jackson National Life Insurance Company of New York**
